Background

The 2014 Oregon Physician Workforce Survey Report is the fifth report in ten years, the result of a public-private partnership between the Oregon Health Authority, the Oregon Medical Association, the Oregon Medical Board, and the Oregon Healthcare Workforce Institute. The 2014 survey is built upon years of Physician Workforce Survey experience that capture and present findings on important changes in the physician population, practice environment, and delivery of services in the state. The partnership built upon the work of the Oregon Medical Association, which conducted physician workforce assessments going back to the 1990s.

The survey is meant to produce information that will help us understand the forces related to effective health care from a physician's perspective. More specifically, the Oregon Physician Workforce Survey assesses impacts of state and federal policies, identifies potential shortage areas both geographically and by sub-specialty, and provides guidance as we navigate through times of change.

Physicians are critical in the delivery of health care. Understanding who they are, their practice activities, the environment in which they work, and the barriers and opportunities they see to providing care helps inform short- and long-term planning for health care workforce needs. The findings from this study will help to guide health policy to more effectively meet the needs of Oregon residents. As in previous versions, this survey seeks to:

- Provide reliable data on the current capacity of Oregon's medical community to deliver health care to Oregon consumers as well as forecast the future capacity of the state's physicians.
- Identify barriers to physician participation in the Oregon Health Plan (OHP), in addition to reimbursement.

The responses also identify reasons why practices close or limit their practice to certain payers such as Medicaid, Medicare, commercial and worker's compensation. It makes an effort to assess the ease or difficulty with which Medicaid patients obtain services.

The 2014 edition of the survey continues several unique questions intended to shed new light on important issues facing physicians and their delivery of health care services to Oregonians. These questions include:

- Self-identification as primary care physicians
- Awareness and use of the Oregon Quit Line
- Sources used as clinical practice guidelines

This year the survey added unique open ended questions about physician wellness and suggestions that might encourage physicians to continue to practice. We also added a series of questions that parallel the ability to obtain services for Medicaid patients, but instead anchored to those who care for patients with serious and persistent mental illness.

2014 Highlights

A majority of physicians (51.6%) described themselves as employees.

Nearly 30 percent of physicians indicated they plan to retire in the next five years.

The proportion of physicians who were somewhat or very satisfied with their careers in the last 12 months has declined since 2012 (74% in 2012 versus 68% in 2014).

Job related burn out and stressed increase considerably since 2012

The proportion of physicians accepting new Medicaid patients continues to increase.

There continues to other access concerns, for special equipment and specialty care including mental health and substance disorder in-patient and out-patient needs.

Methodology

The number of questions was reduced in the 2014 Oregon Physician Workforce Survey by using information from the Oregon Medical Board (OMB) licensing dataset. The survey also went "paperless," delivering and receiving all survey materials electronically.

Using the Oregon Medical Board (OMB) dataset, the survey was sent to all licensed Oregon physicians meeting the following criteria:

- In-state practice address;
- Valid email address;
- MD and DO license types;
- Active;
- Good standing; and
- Not have license limitations or restrictions.

Using these inclusion criteria, the original eligible OMB list of 10,432 records, was reduced to 2,310 eligible physicians. This survey was conducted as a web-based survey only; it used a secure server and was built and deployed using Inquisite™ version 9.5. The survey was deployed November 2014 and was closed to responses January 2015.

Following the initial survey invitation and email reminders, a postcard was sent through the mail to non-respondents. After the survey was opened online and email invitations were sent, non-respondents were sent up to three email reminders. Of the eligible respondents, the response rate was 22.1 percent. While the 2014 online survey response was less than the 34 percent response rate achieved in the 2012 mailed version, the response rate is comparable to web and email based surveys of physicians without incentives, and the response and non-response populations were similar in age, gender, regional distribution, and specialty.

Table 1: Respondent Comparison, 2014 and 2012

Respondent Characteristics		2014 (n=2315)	2012 (n=3226)
Gender	Male	64.5%	67.7%
	Female	35.5%	32.2%
Age	Under 40	17.0%	16.4%
	40-49 years	30.8%	23.7%
	50 to 59 years	26.1%	29.0%
	60 to 69 years	20.2%	24.9%
	70 years or more	5.9%	6.1%
Region	Portland Metro Area	57.6%	49.5%
	Mid-Willamette Valley	19.4%	18.0%
	Northwestern	1.9%	2.4%
	Southern	8.6%	7.9%
	Eastern	3.2%	2.1%
	Southwestern	1.5%	1.5%
	Central	7.8%	7.8%
Specialty	General internal medicine	15.8%	16.0%
	Pediatric subspecialty	1.6%	1.7%
	Medical subspecialty	17.5%	15.9%
	Other	7.3%	2.0%
	Family or general practice	15.7%	17.4%
	Obstetrics and gynecology	4.6%	4.9%
	General pediatrics	6.0%	6.2%
	General surgery	3.7%	3.8%
	Neurological surgery	0.7%	0.8%
	Psychiatry	5.3%	6.9%
	Hospital based specialty	14.8%	17.5%
	Surgical subspecialty	6.9%	6.6%

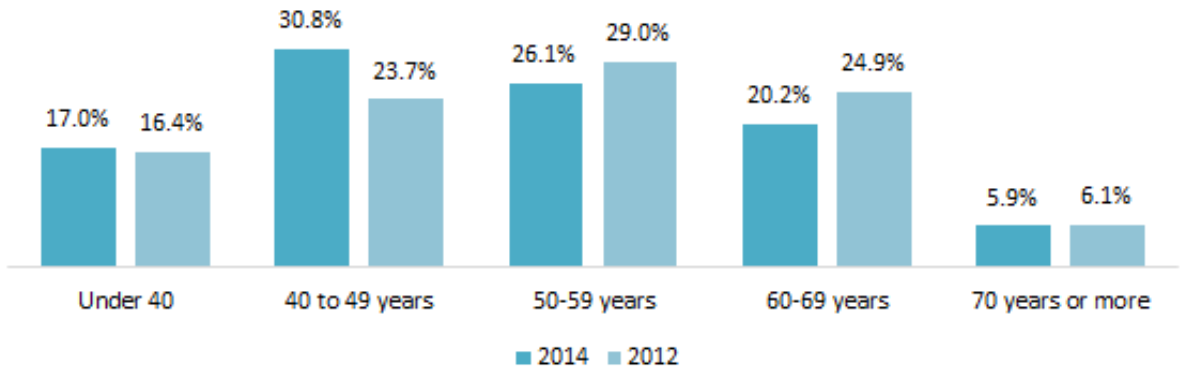
Respondent Demographics

Gender and Age

Of the physicians who responded to the 2014 survey, 64.5 percent were male and 35.5 percent female.

More than a quarter of the respondents were 50 to 59 years of age, and over 30 percent were 40 to 49 years of age (see Figure 1). Seventeen percent were under age 40 and nearly six percent were 70 years of age or older.

Figure 1: Age distribution



Race and Ethnicity

Respondents largely described themselves as White (88.2 percent), 7.6 percent as Asian, 1.0 percent as American Indian or Alaska Native, 0.4 percent as Black or African American and 0.3 percent as Native Hawaiian or Pacific Islander. Two percent identified as Hispanic, Latino, or Spanish. These percentages differ from the distribution of responses to racial and ethnic data collected in the State of Oregon as a whole, especially in the case of ethnic self-identification: while only two percent of physician respondents identify as Hispanic or Latino, 12 percent of Oregon's population so self-identifies.

Table 2: Oregon's physician self-reported race compared to Oregon's general population

Race	2014 PWS	2013 Oregon
White	88.2%	88.1%
Black or African American	0.4%	2.0%
Asian	7.6%	4.1%
Native Hawaiian/Other Pacific Islander	0.3%	0.4%
American Indian/Alaskan Native	1.0%	1.8%

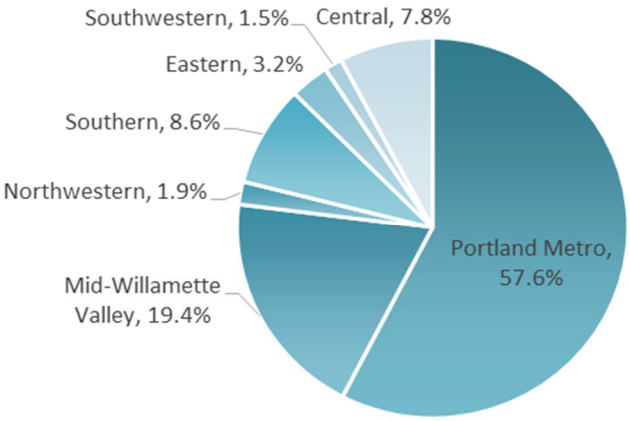
This table excludes "other" and "two or more" races. Percentages may not add up to 100.

Practice Characteristics

Practice Region

The majority of physicians are in the Portland Metropolitan area, comprising 57.6 percent of respondents. Nearly 20 percent were from the Mid-Willamette Valley. The Central and Southern regions comprise 16 percent of respondents.

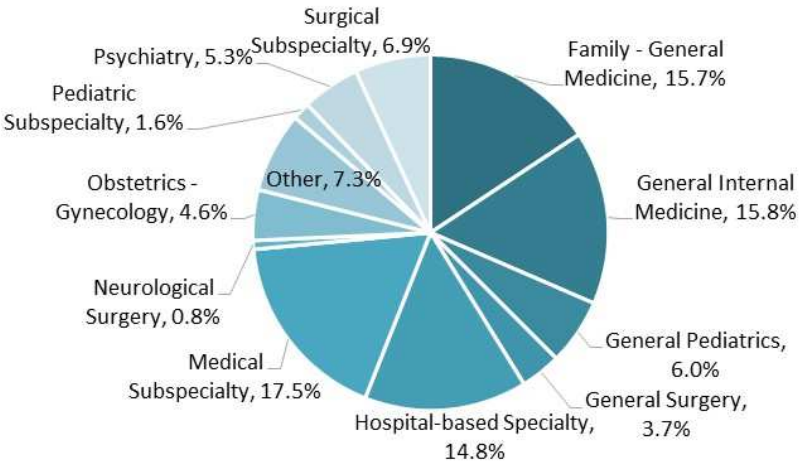
Figure 3: Physician by region



Specialty

The 2014 Oregon Physician Workforce Survey collapses sub-specialties into 12 major categories. Family/General medicine specialists and hospital-based specialists are the largest groups responding, at 17.5 percent of the total each, followed by general internal medicine specialty, at 16.1 percent of the total. Appendix C contains a crosswalk of both recoded, and the original groupings.

Figure 4: Specialty categories

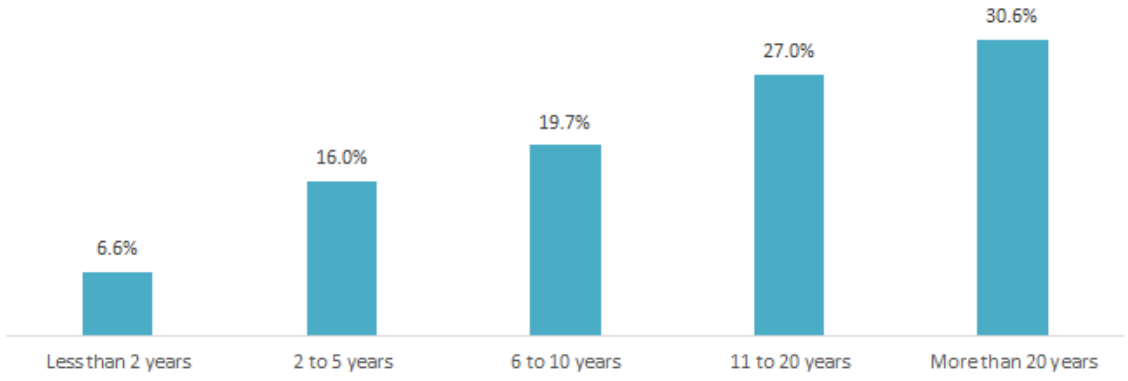


Professional Characteristics

Years Licensed

Over 30 percent of the physicians have been licensed for more than 20 years. Nearly one out of four physicians have been licensed five years or less.

Figure 5: Years licensed any state



Employment Status

More than half (51.6 percent) of physicians were employees. Thirty-six percent were full or part owners in their practice. Less than nine percent were independent contractors. The number of physician-respondents reporting their status as employees is up nearly 13 percent from 38.7 percent in 2006.

In the Northwestern region, 64.6 percent of respondents were employees. Southern and Southwest areas of the state had the lowest percent are of physician-respondents who are employees. Figures 6 through 13 show the employment status of physicians in their primary practice within each region of the state.

Figure 6: Statewide

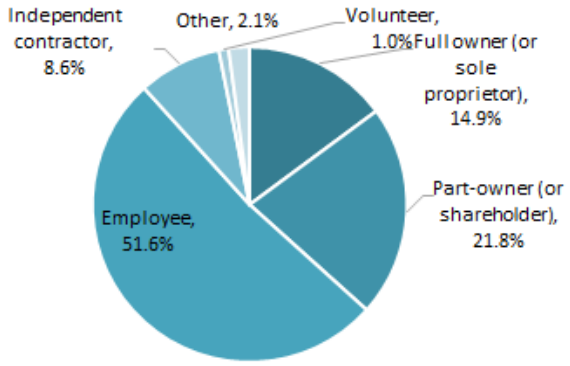


Figure 7: Portland - Metro

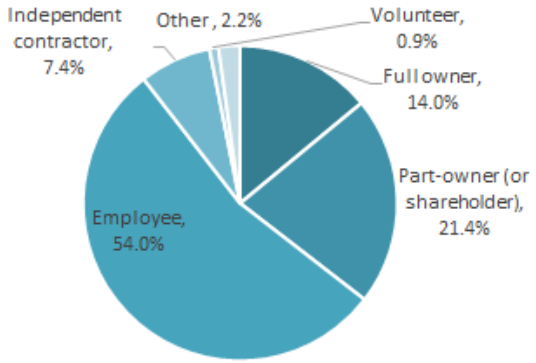

Figure 8: Mid-Willamette Valley

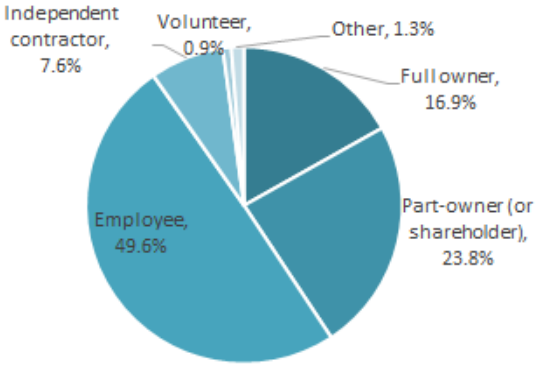

Figure 9: Northwestern

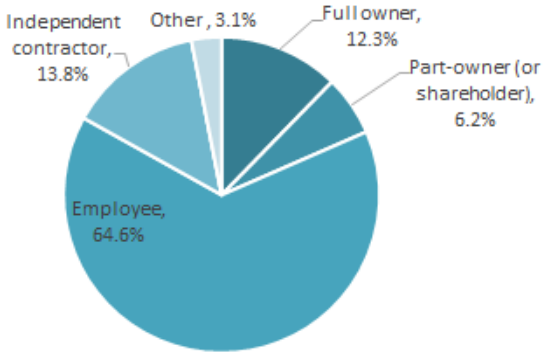

Figure 10: Southern

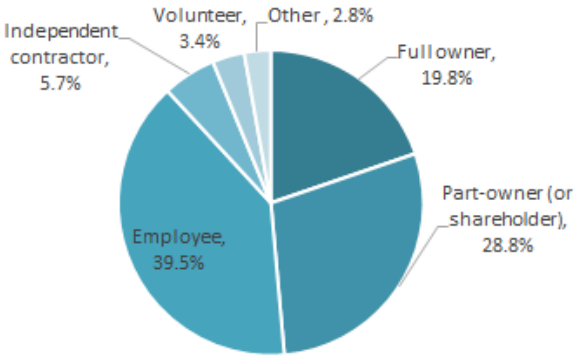

Figure 11: Eastern

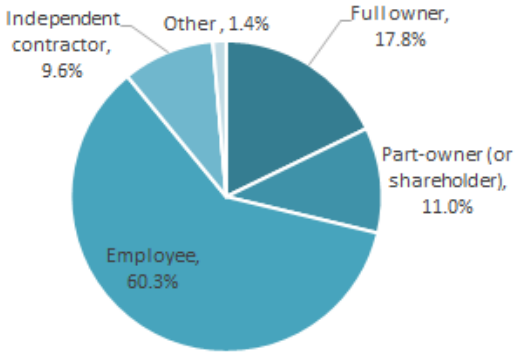

Figure 12: Southwestern

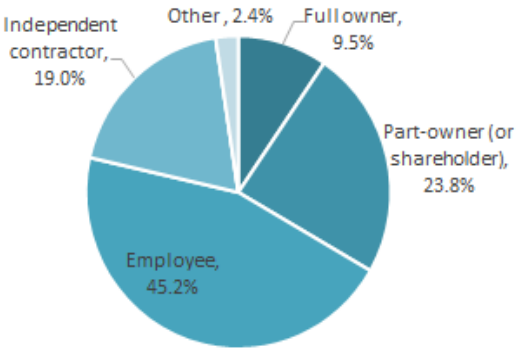

Figure 13: Central

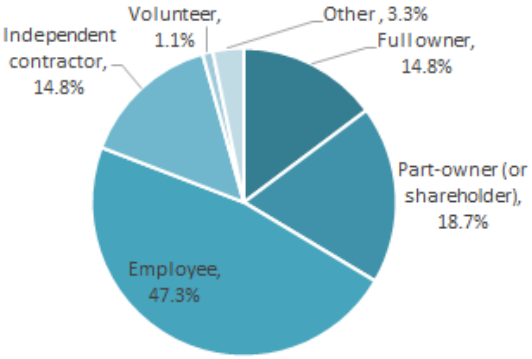
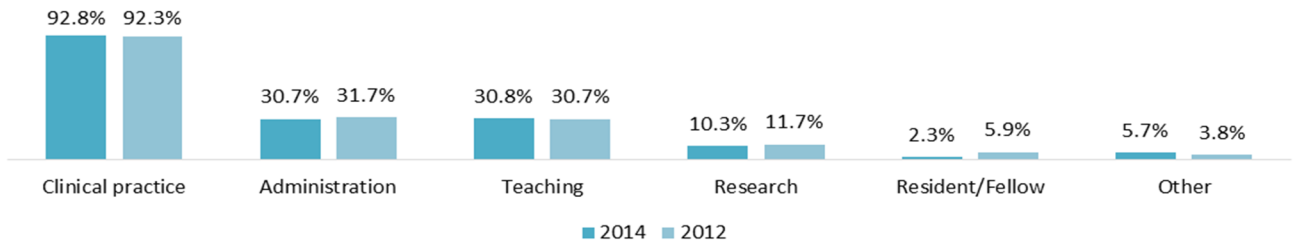


Current professional activities

Respondents selected their primary professional activity from six categories: direct patient care, administration, research, resident or fellow, and teaching. Over 92 percent of respondents indicated that they performed clinic practice related to direct patient care, consistent with previous results. Nearly 31 percent of physician-respondents reported teaching in some capacity.

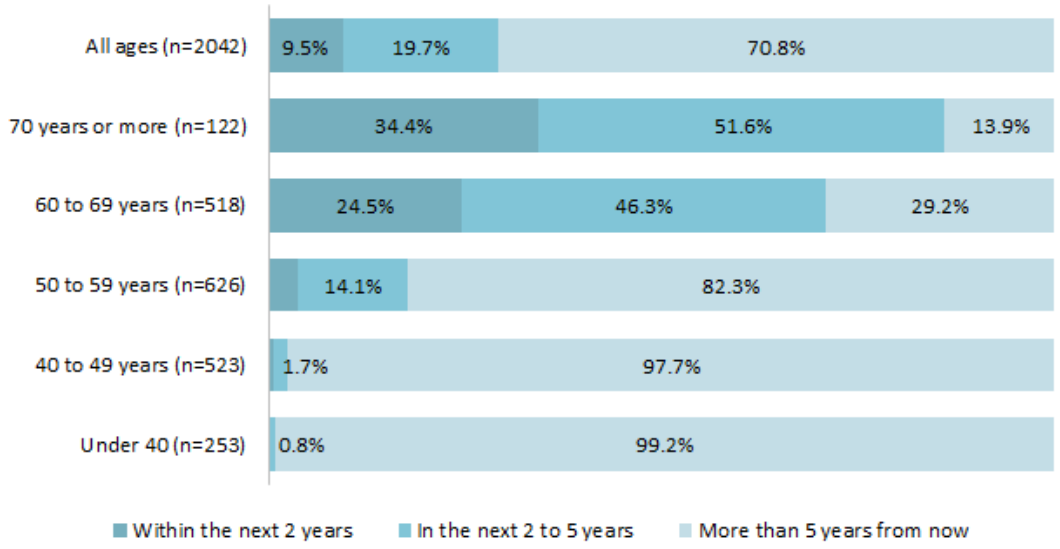
Figure 14: Professional activities



Physician retirement plans

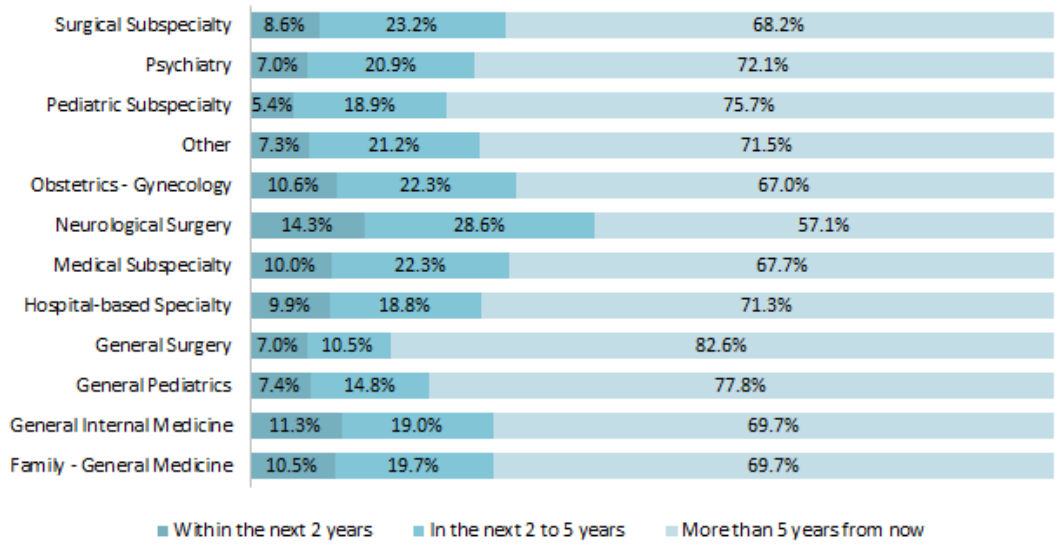
Nearly 30 percent of respondents indicated plans to retire in the next five years.

Figure 15: Retirement plans by age category



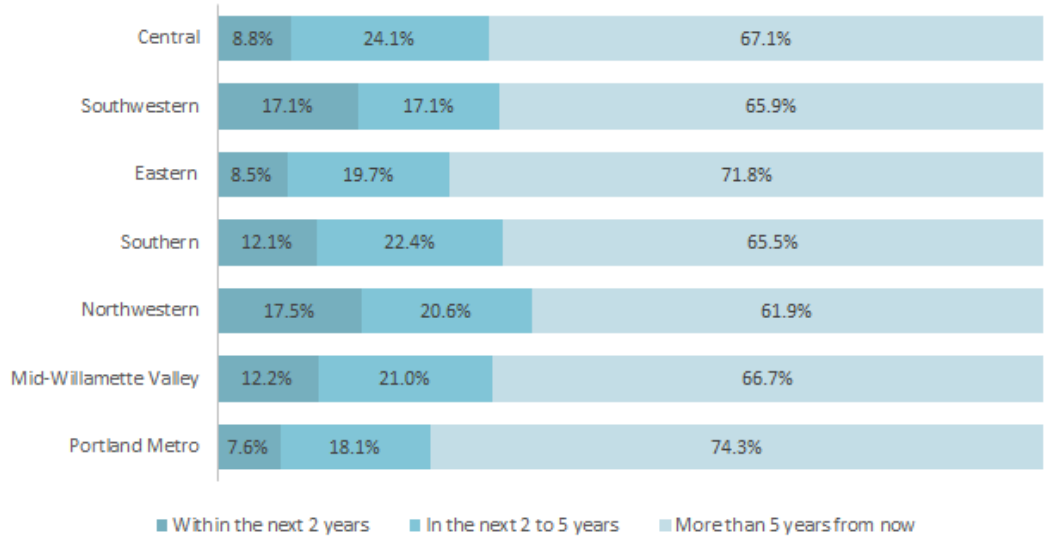
Physicians in the neurological surgery sub-specialty showed the highest percentage intention to retire within five years. Two specialty groups—general pediatrics and obstetrics and gynecology—showed about one out of three physicians have plans to retire within five years. General surgery and general pediatrics had the lowest percentages expressing the intention to retire within five years.

Figure 16: Plans to retire by specialty



While the numbers should be viewed with some caution, nearly 39 percent of the physicians in the Southwestern region of the state reported they are planning to retire within the next five years, up from 19 percent in 2009. By contrast, the Northwestern region saw a drop in physicians planning retirement, from 31 percent in 2009 to 26 percent in 2014. The Eastern region also witnessed an even larger reduction in the percentage of physicians planning to retire, 33 percent in 2009 to 24 percent in 2014. Given the change in ages in the region and numbers of physicians, it appears that physicians in both regions have retired as indicated in the previous survey.

Figure 17: Plans for retirement by region

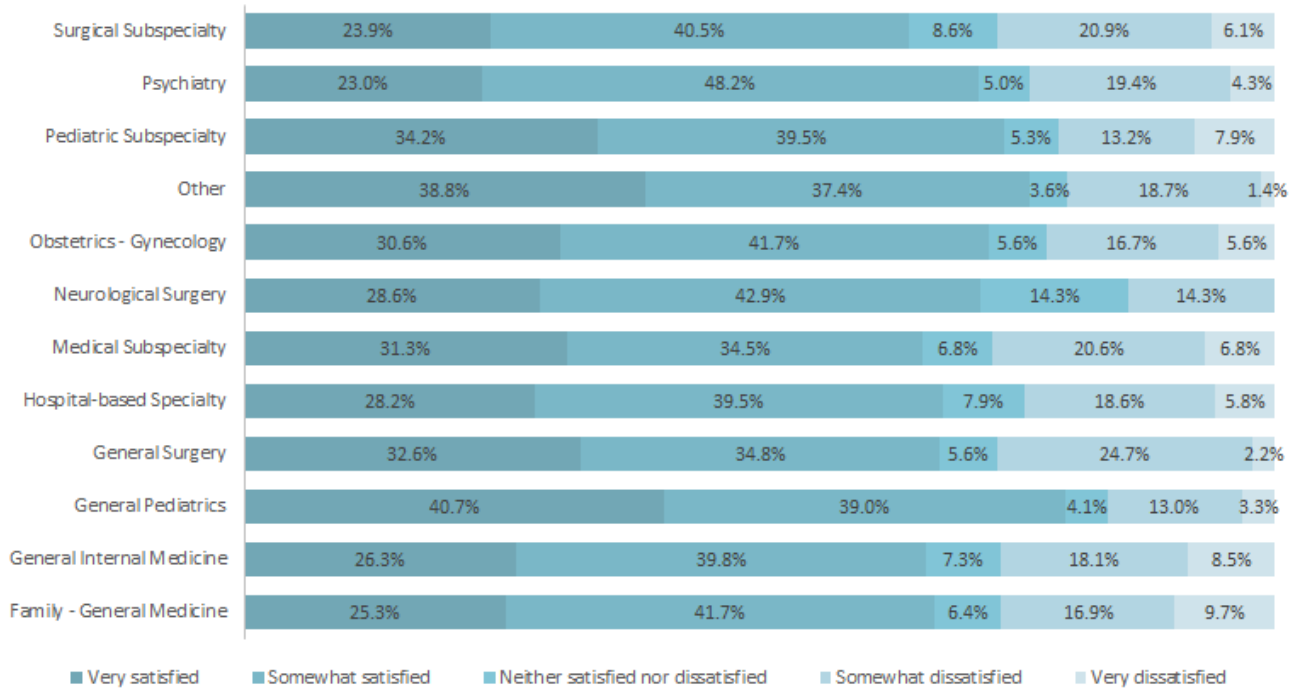


Professional Satisfaction

This survey included three questions about career satisfaction. The first asked about satisfaction in the last 12 months; the second asked about respondent satisfaction with his/her medical career overall, and the third asked about the greatest source of respondents professional satisfaction.

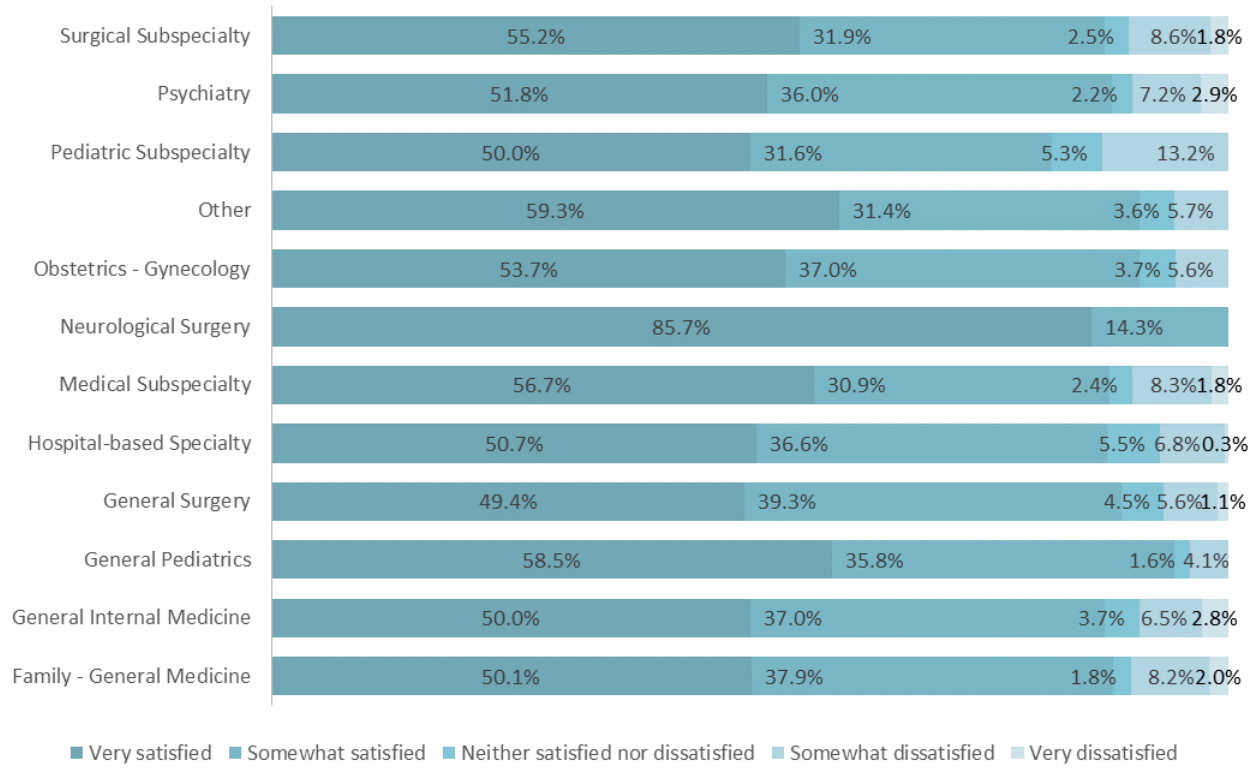
The General Pediatric physicians reported the highest levels of satisfaction in the last 12 months. Medical and surgical subspecialties reported the lowest.

Figure 18: Physician satisfaction over the last 12 months, by specialty

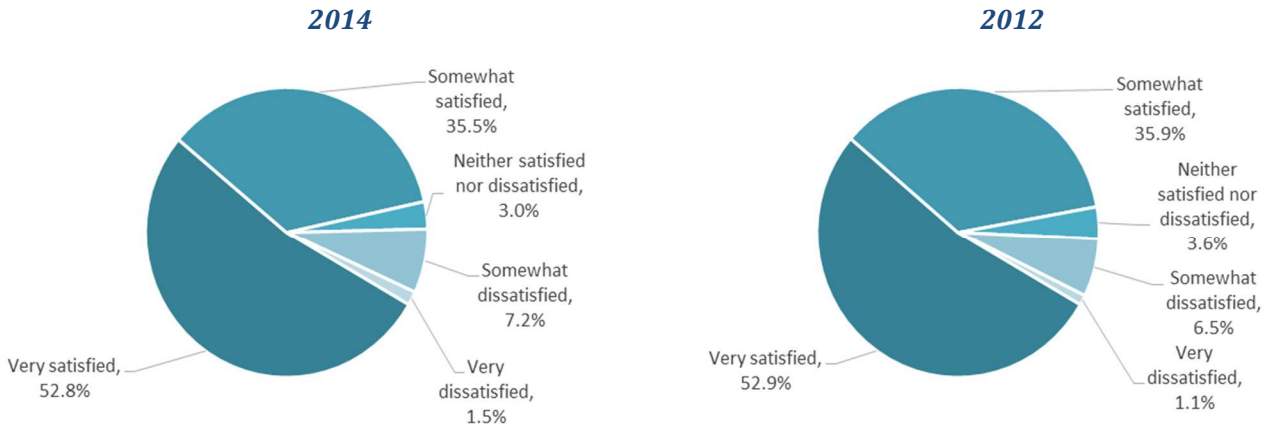


The differences between subspecialist groups become less pronounced when physicians are asked about their career overall. The neurological surgery group stands out, but the small number of respondents is the most likely reason. General pediatrics (58.5 percent very satisfied) and Obstetrics/Gynecology (53.7 percent very satisfied) expressed the greatest levels of satisfaction with their careers overall. Psychiatrists and hospital- based specialists reported the least dissatisfaction in their areas.

Figure 19: Physician satisfaction with overall career, by specialty

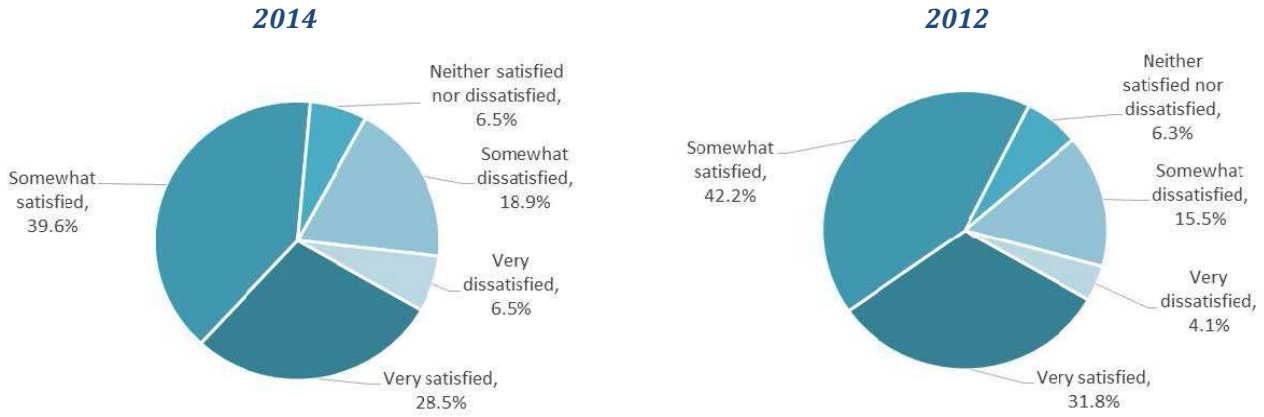


Figures 20 and 21: Career satisfaction overall, 2014 and 2012



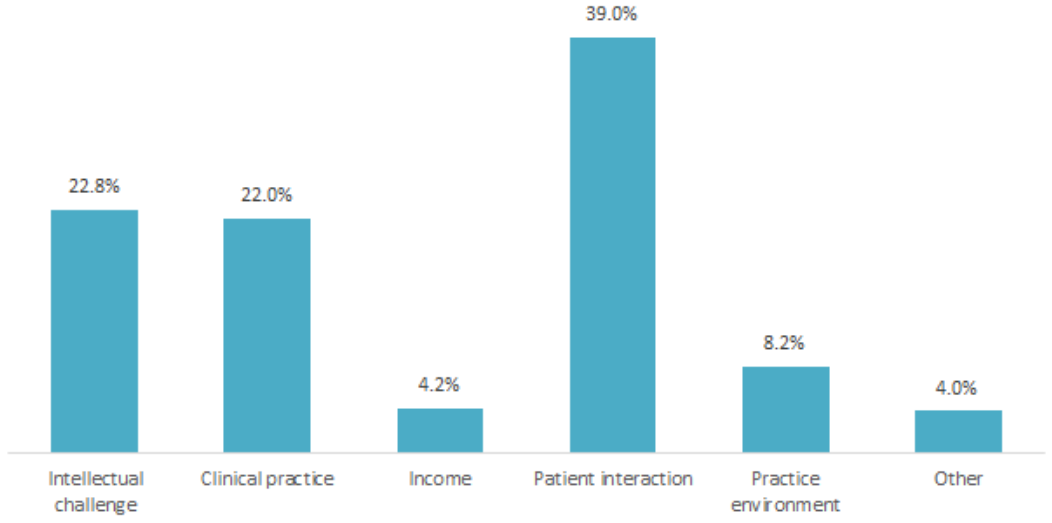
The proportion of physicians who indicated they were somewhat or very satisfied with their careers in the last 12 months has declined since 2012. Those reporting somewhat or very satisfied in 2014 was 68 percent, compared to 74 percent in 2012. Similarly, the percent being somewhat or very dissatisfied has gone up from 19.6 percent in 2012 to 25.4 percent in 2014 (figures 22 and 23).

Figures 22 and 23: Career satisfaction in the last 12 months, 2014 and 2012



Physicians pointed to patient interaction as their greatest source of satisfaction, as 39 percent reported in 2014. Income ranked the lowest among categories at four percent. Moreover, female respondents reported patient interaction as their greatest source of professional satisfaction by nearly a 10 percent margin (see appendix B).

Figure 24: Greatest source of satisfaction



Providing Care

Overall, nearly 60 percent (59.2) of respondents reported seeing established patients for non-urgent appointments in less than seven days. This varies by region from 50 percent to nearly seventy percent. In 2012, thirty to thirty-five percent of physicians in the Southern and Southwestern region reported seeing established patients for non-urgent appointments in less than seven days, increasing to 50 percent respectively in 2014. Sixty-six percent of respondents reported a wait of less than seven days in 2004 (compared with 50.9 percent in 2006 and 54.8 percent in 2009).

Figure 25: Percentage of physicians reporting a less-than-seven-day wait for non-urgent appointments for established patients, by region

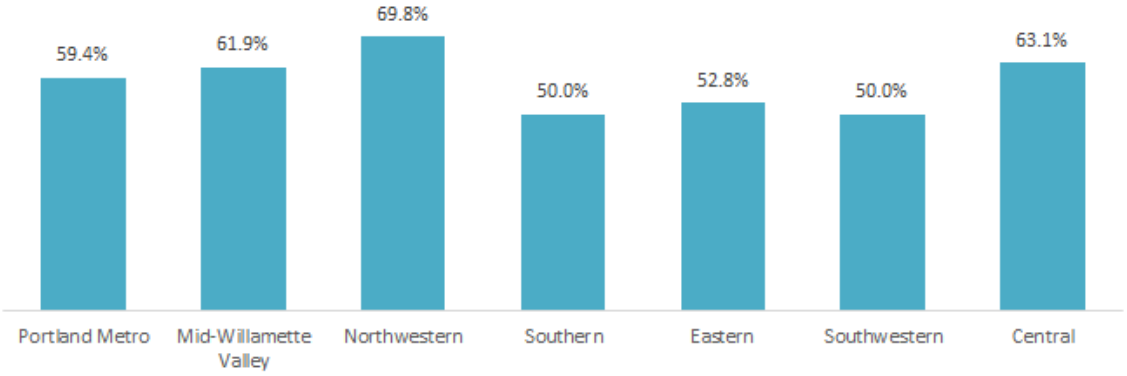


Figure 26: Percentage of physicians reporting a less-than-seven-day wait for non-urgent appointments for established patients, by specialty

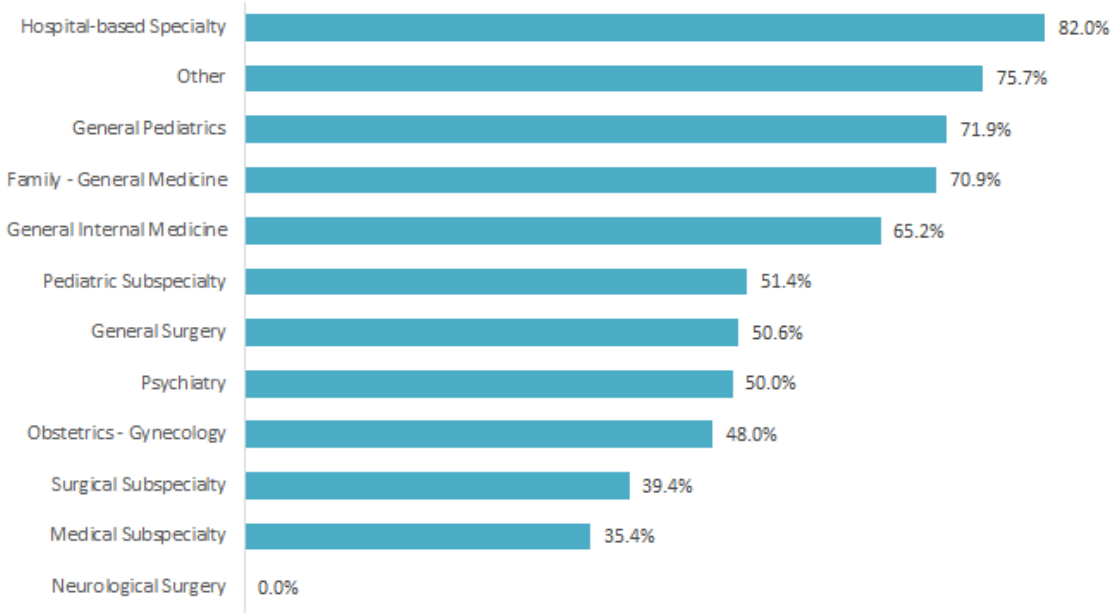

Figure 27: Non-urgent appointments needing two weeks or more to schedule by specialty

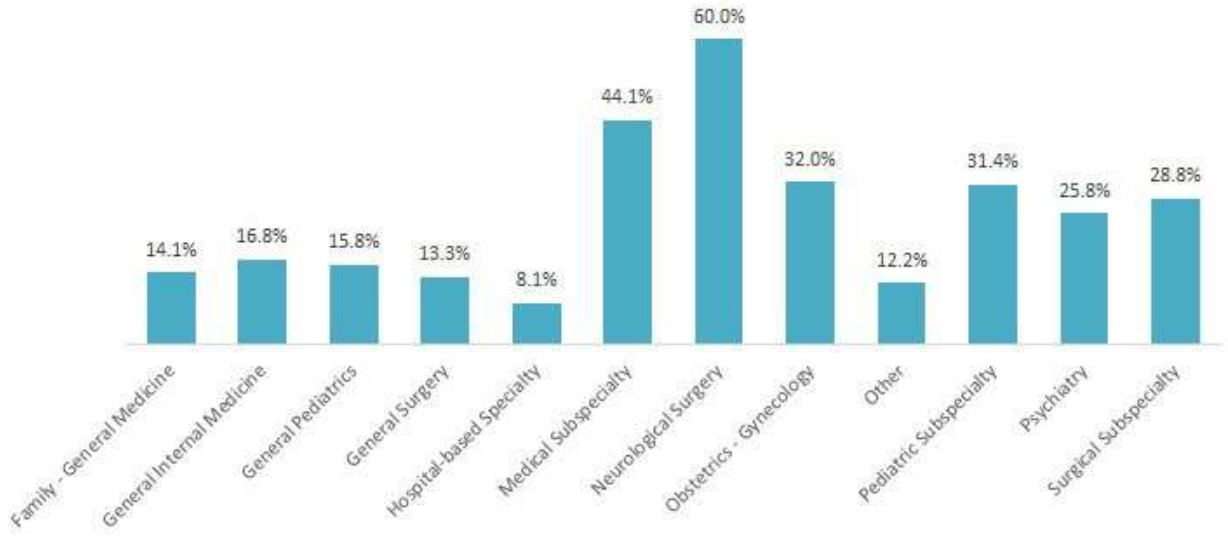

Physician Time

Physicians were asked to give two estimates of the total amount of time spent in a typical week. One question asked about time spent in direct patient care and the other asked about time spent in administrative tasks associated with patient care.

Figure 28: Hours spent in direct patient care in a typical week, all specialties

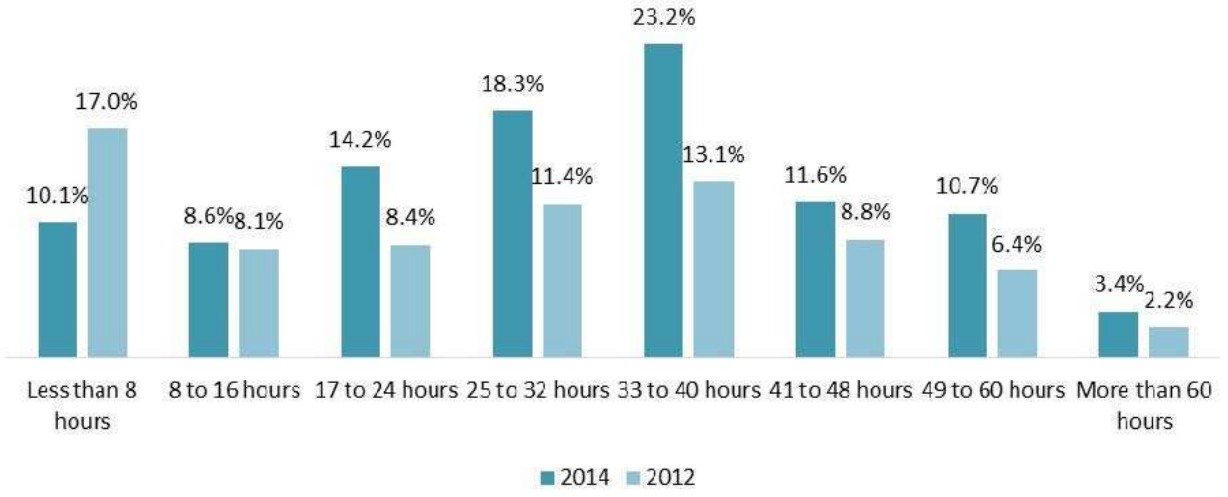

Figure 29: Hours spent doing administrative tasks associated with patient care in a typical week, all specialties

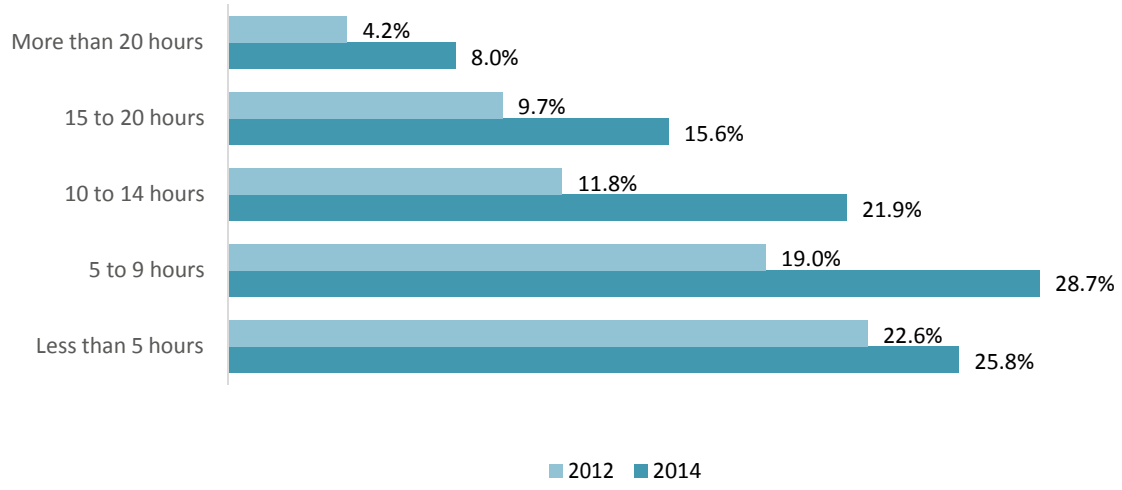

Taking call

The percent of the responding physicians who reported taking call continues to decline. This question was not asked in 2004. In 2006, 65.1 percent of respondent physicians saw at least two patients a week as a result of taking call. In 2009, that percentage had declined to 58.1percent. In 2014, only 44.5% of respondent-physicians reported seeing one or more patients a week as a result of taking call. Nonetheless, at the high end, the percent of respondents seeing six patients or more has remained more stable, at more than 20 percent in 2006, 2009, and 2012. In 2014 there was a slight decline to just under 17 percent. Excluding hospital-based specialties, medical subspecialists and general internal medicine were most likely to see patients from taking call.

Figure 30: Average weekly patients as a result of taking call, all specialties

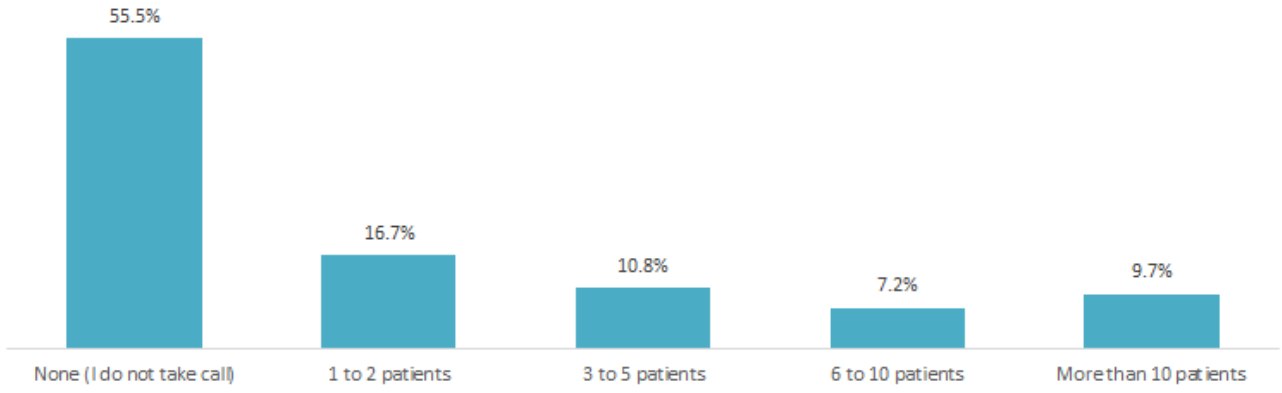

Figure 31: More than 6 patients per week as a result of taking call by specialty

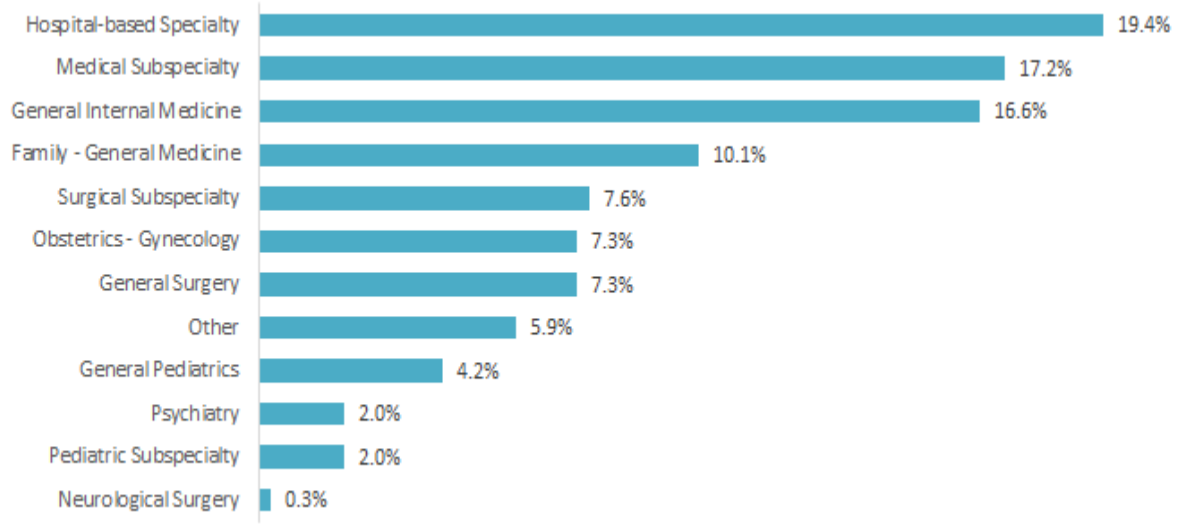
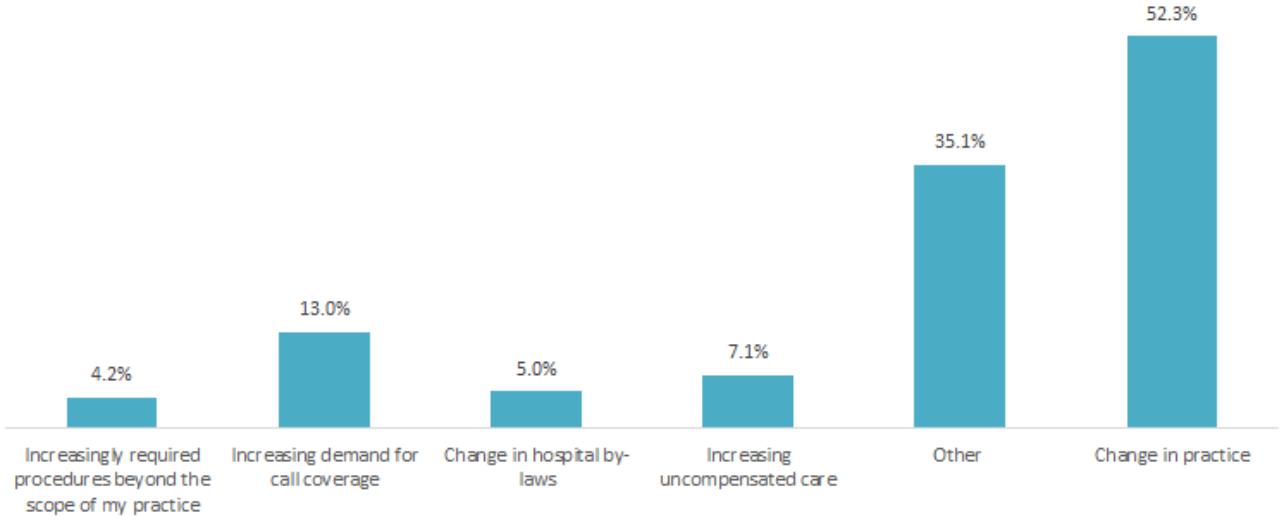


Changes in Hospital Privileges

Of the responding physicians, 10.8 percent changed hospital privileges in the previous 12 months. Physicians sometimes noted multiple reasons for changing, including those listed in Figure 32:

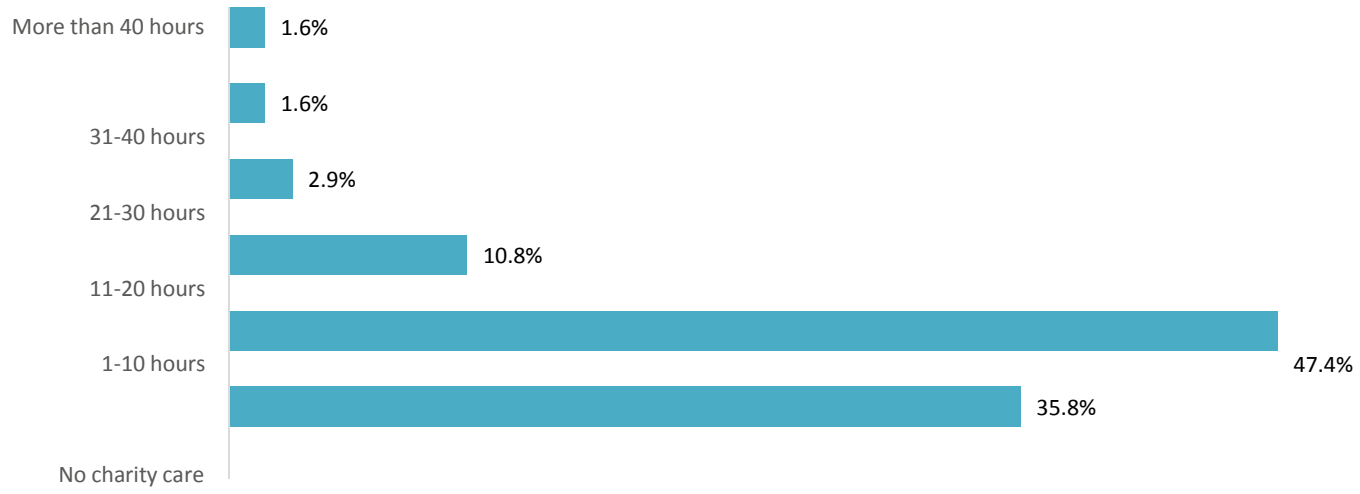
Figure 32: Reasons for changing privileges, all specialties



Charity Care

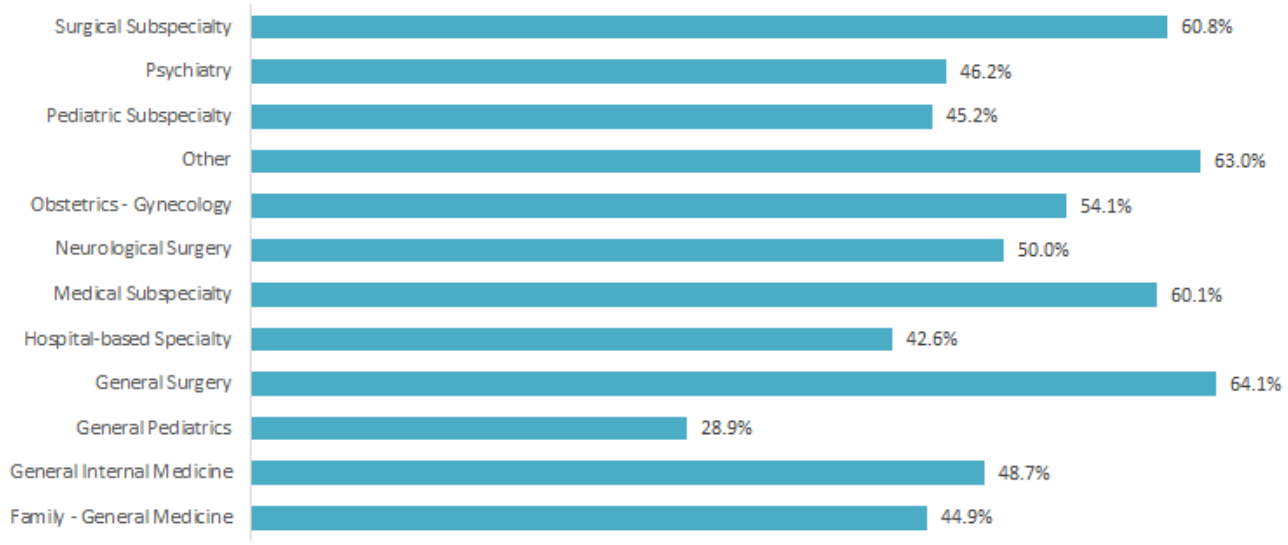
Physicians were asked to estimate the number of hours in a typical month they spend providing charity care. Physicians providing from one to ten hours of charity care in an average month has returned to rates seen in 2006 (47.9%) an increase from 41.4 percent in 2012. Overall, 57.5 percent of respondents reported providing some charity care per month.

Figure 33: Overall charity care provided, all specialties



There continues to be considerable variation in the provision of charity care by specialty.

Figure 34: Percentage providing charity care, by specialty



Primary Care

The 2014 survey asked whether or not the respondent considers him- or herself a primary care physician.

Figure 35: Primary care physicians Statewide

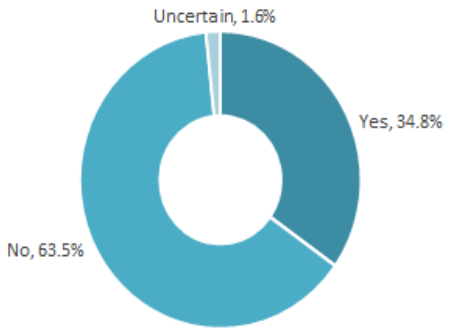


Figure 36: Primary care physicians by gender

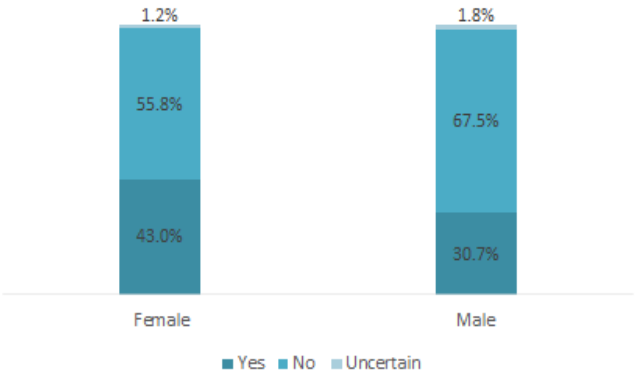

Among respondents, there is a sizable gap between male and female physicians who identified themselves as primary care physicians, as evidenced in Figure 36 above.
In addition, the number of respondents from the Portland Metropolitan region did affect the statewide distribution of primary care physician identification. Regional distribution and distribution by specialty show a more complete picture of statewide identification by respondents.

Figure 37: Regional identification as primary care physician

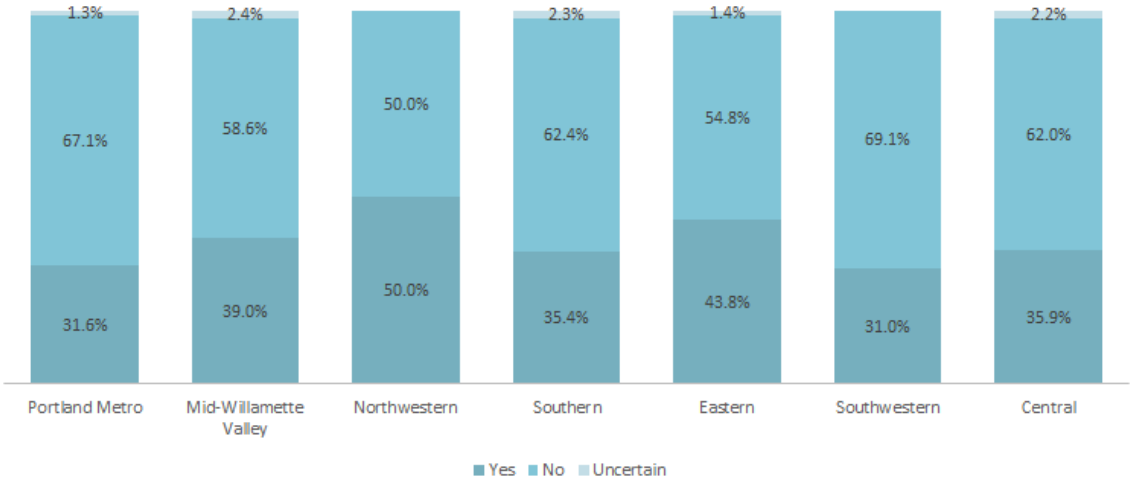

Figure 38: Identification as primary care physician, by specialty

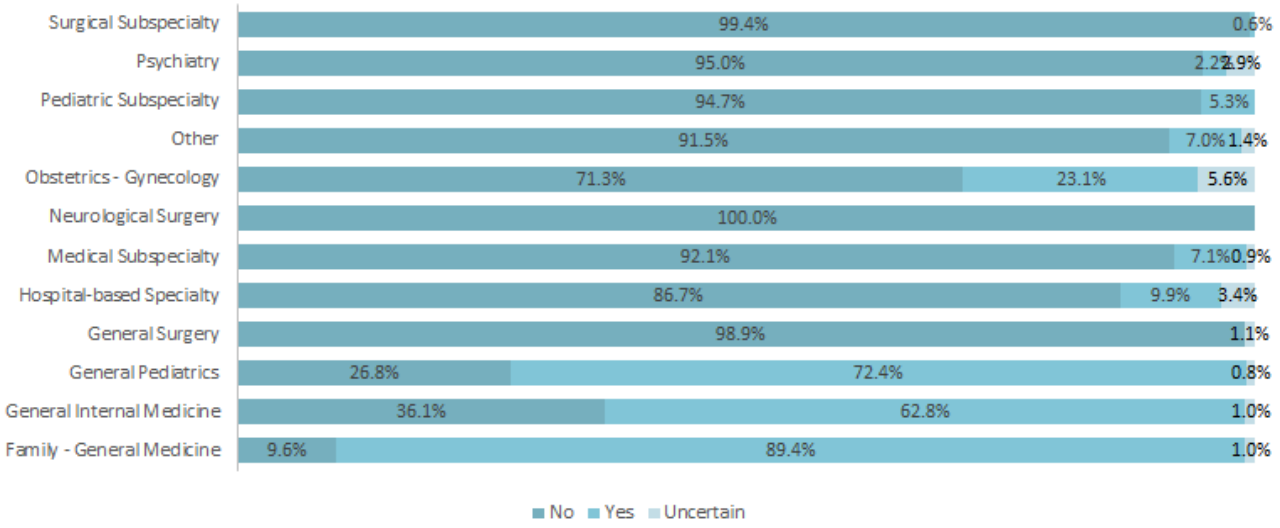


On most other characteristics (age, practice size, etc.), responses were clustered fairly closely together. See Appendix B for detailed tables.

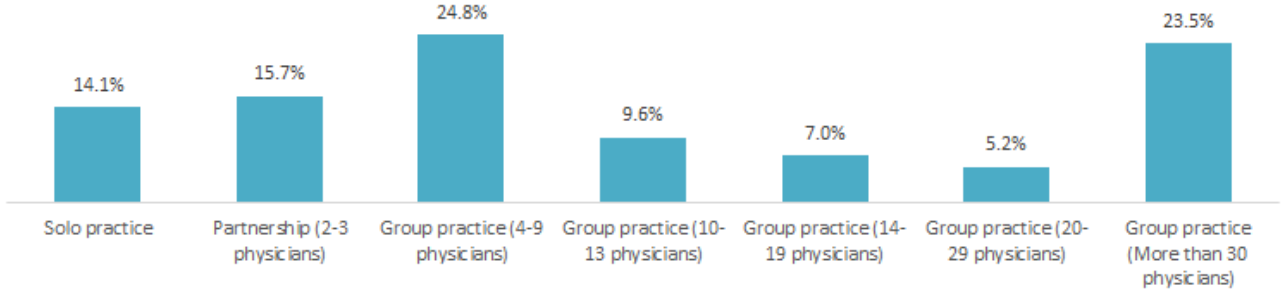
Practice Characteristics (continued)

Practice characteristics are broken into three areas: size, organization, and patient volume. Of these questions, patient volume was introduced in 2004. Physicians were also asked about second practice location and volume, if any.

Practice Size

Statewide, the most commonly reported practice size were group practices of 4 to 9 physicians (24.8 percent), similar to previous reports. As one might expect, solo practices remain most common in the Eastern region (26 percent) and are least common in the Portland Metro area (12.2%) and Central Valley region (12.8%). Respondents reporting solo practices have declined since 2006. From 2006 to 2014, solo practice went from 19.8% of respondents to 14.2% of respondents.

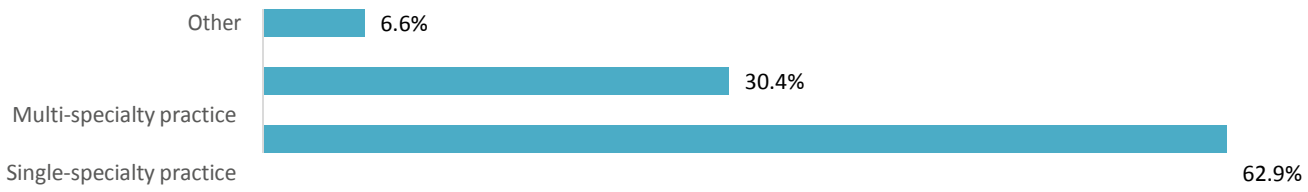
Figure 39: Practice size, Statewide



Practice Organization

Most of the physician-respondents practiced in single specialty practices (62.9 percent).

Figure 40: Practice organization, Statewide



Patient Volume

Respondents who identified as family practice physicians and pediatricians saw the highest volume of patients weekly: 24.8 percent of family practice physicians and 21.3 percent of pediatricians reported they see between75 and 100 patients weekly. This is a decline from the 2012 report.

Figure 41: Average weekly patient volume, all specialties

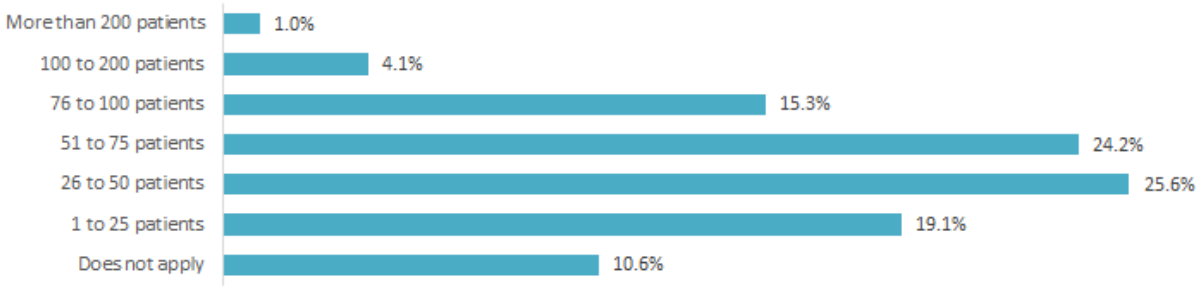


Figure 42: Average weekly patient volume, primary care physicians vs. non-primary care physicians

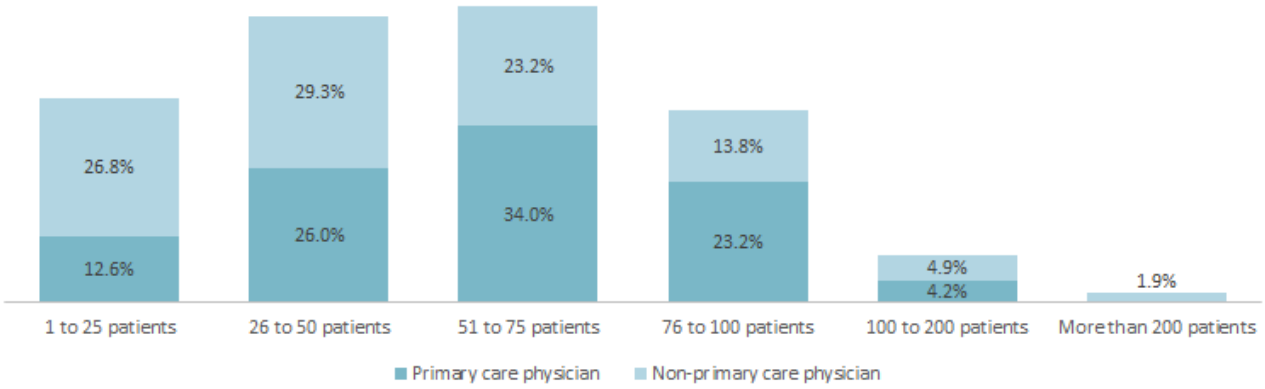
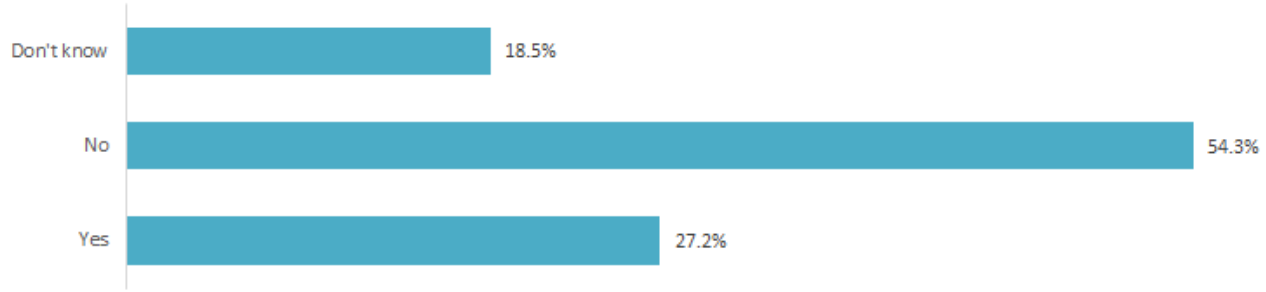


Medical Home Status

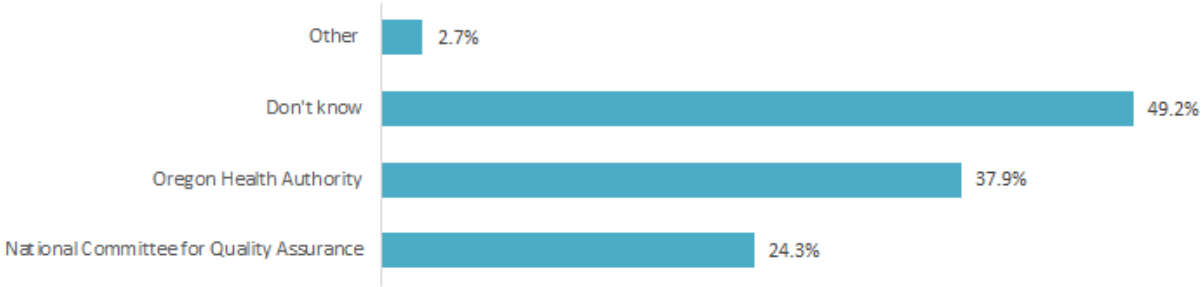
In the 2014 survey, participants were asked if their practice had formal medical home/patient-centered primary care home recognition, and if so, which organizations granted recognition. They were also asked if their practice was seeking such recognition.

Figure 43: Statewide formal medical home/patient-centered primary care home recognition



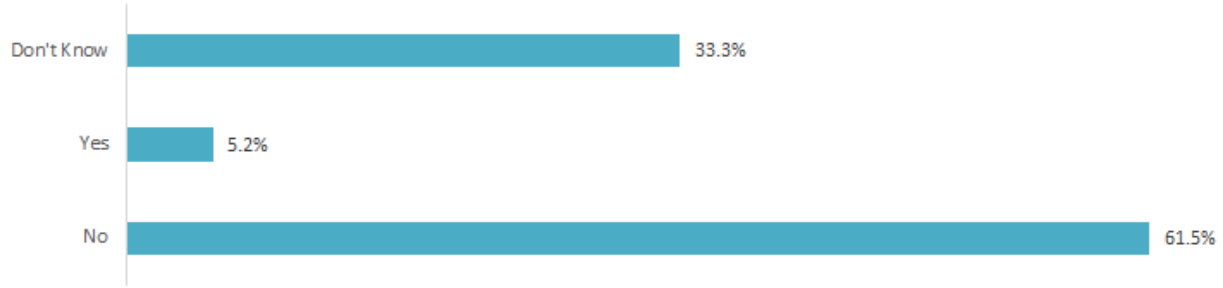
Most respondents did not know which organization recognizes their medical home/patient-centered primary care standard practice.

Figure 44: Statewide formal medical home/patient-centered primary care home: recognizing organizations



For the remainder, those who did not have medical home recognition status were asked if they were seeking recognition. Results are below.

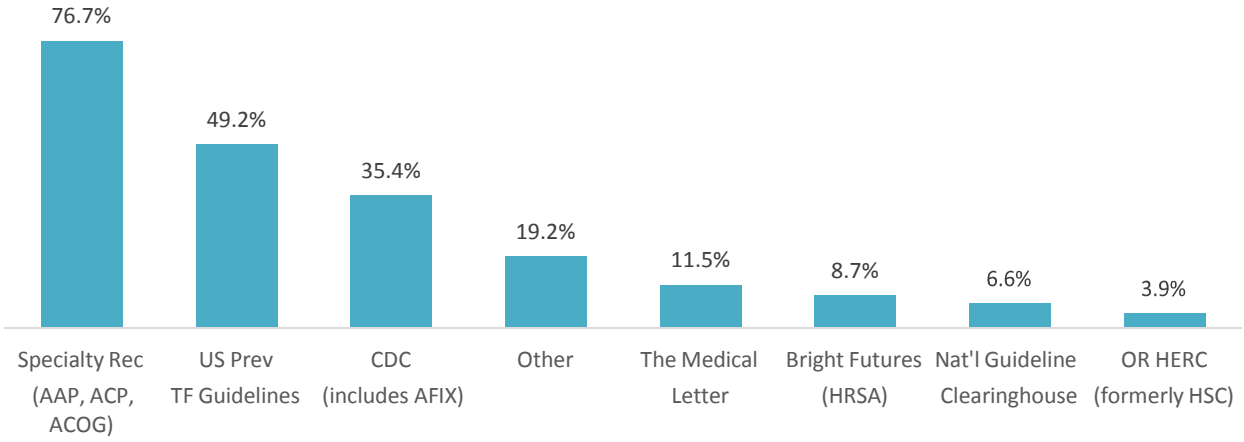
Figure 45: Statewide formal medical home/patient-centered primary care home recognition sought



Use of Practice Guidelines

For the 2014 survey, respondents were asked to identify current guidelines in place. Statewide, the breakdown was as follows:

Figure 46: Practice guidelines Statewide



Payer Acceptance

A key series of questions asked in the physician workforce survey were about acceptance of specific payer types. In 2014, physicians were asked if their practices were closed, limited or completely open to acceptance of Medicare, commercial, Worker's Compensation, and Medicaid as insurance payers. Further, physicians who indicated they limited or were closed to specific payer types were asked a series of questions about the factors affecting those decisions. The mix of insurance types included in the survey has varied from iteration to iteration. In 2006, physicians were asked about Worker's Compensation but not commercial insurance. In 2009, commercial insurance was added and Worker's Compensation was removed. In addition, questions about Medicaid patients and access to services have been asked in all recent surveys.

Medicare

Figure 47: Acceptance of new Medicare patients 2004 - 2014

Figure 48: Acceptance of Medicare patients, by specialty

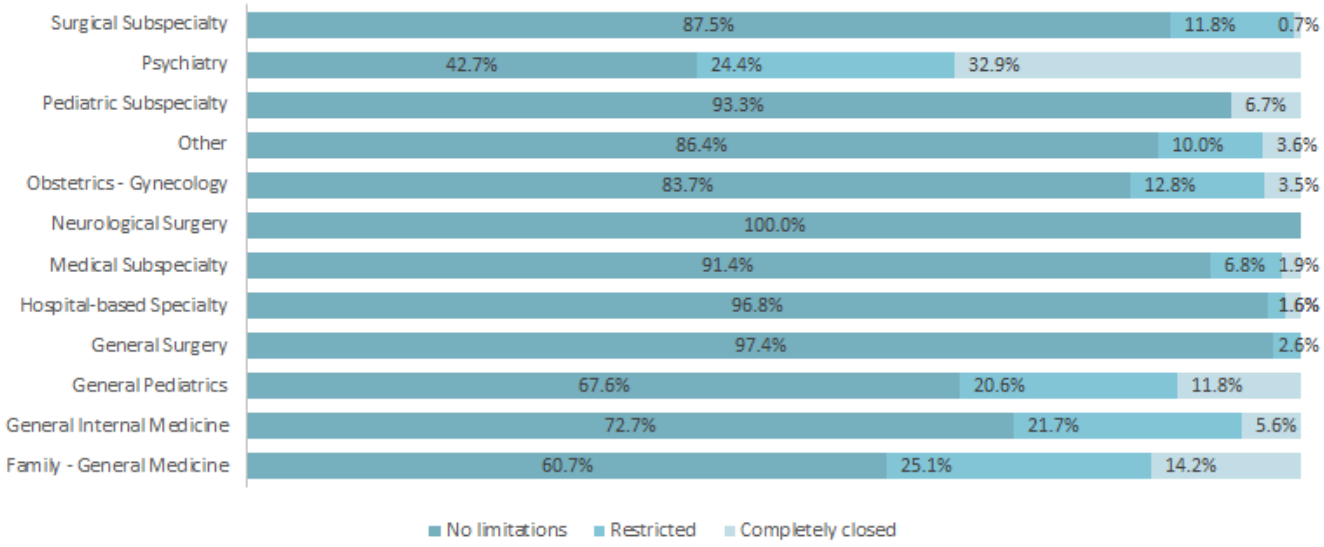


Figure 49: Acceptance of Medicare patients, by region

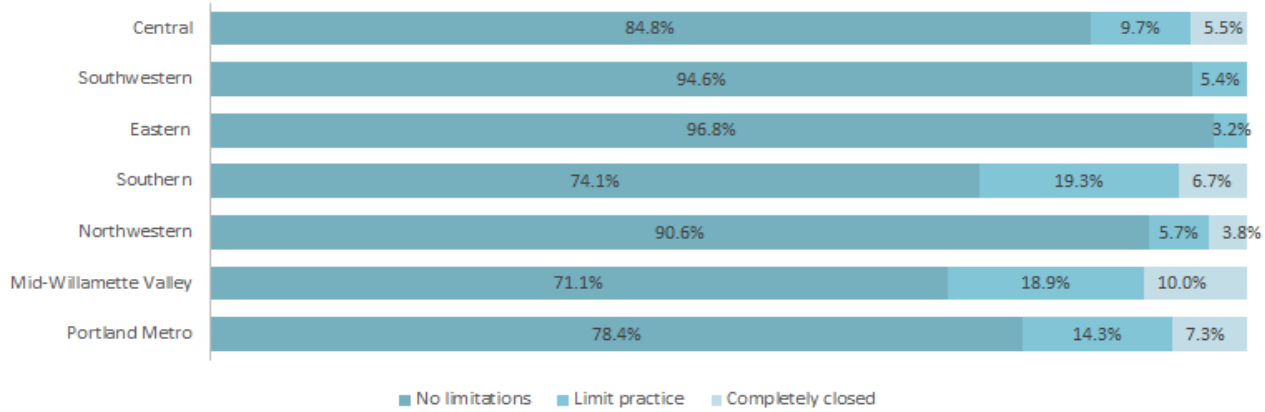
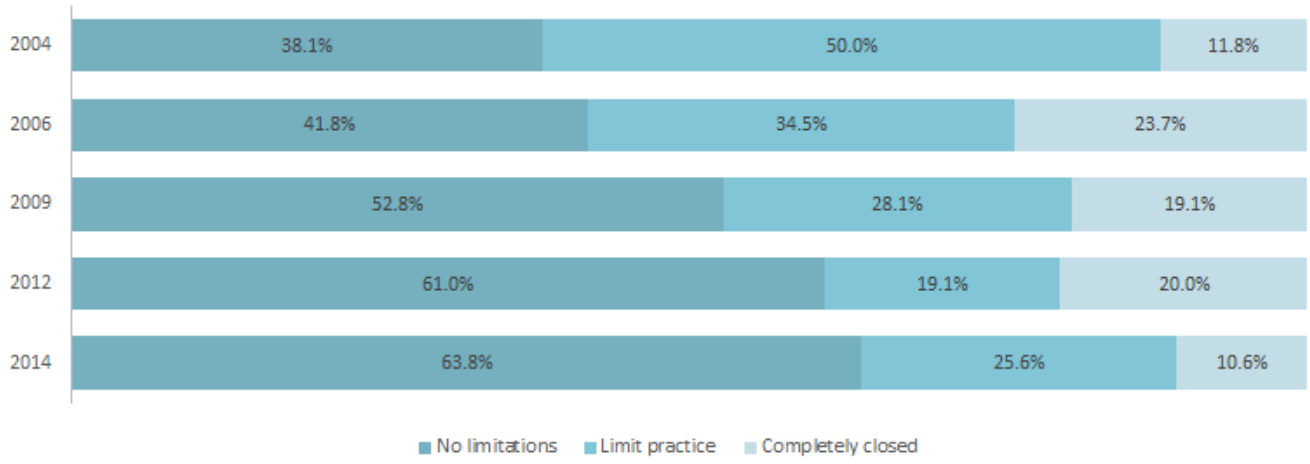


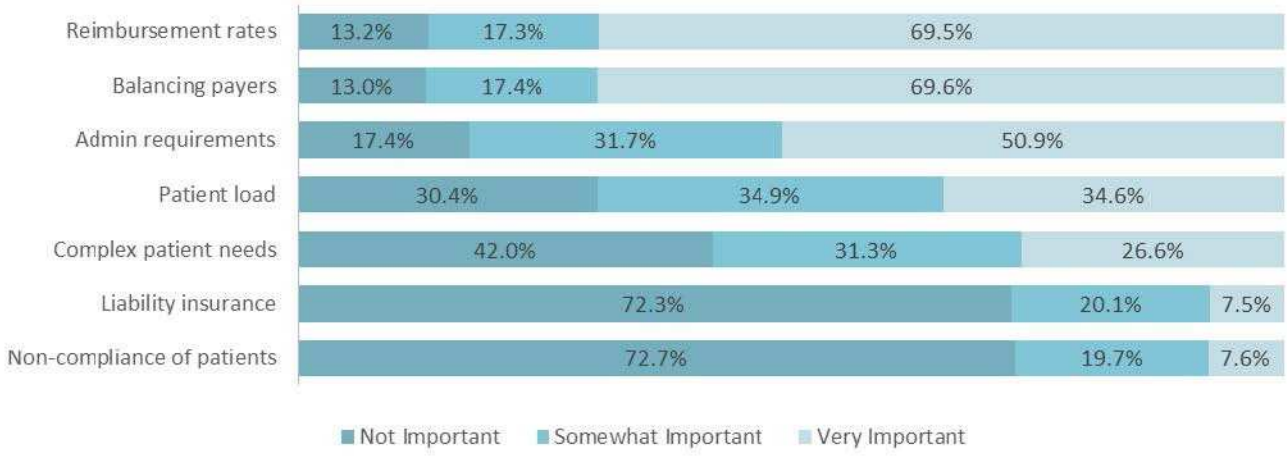
Primary care physicians were most likely to restrict Medicare. While the percentage of primary care physicians completely closed to new Medicare patients has dropped from about 24 percent in 2006 to 10.6% in 2014, this is similar to the 2004 figure of 12 percent. However, the percentage of completely open practices has increased.

Figure 50: Primary care acceptance of new Medicare patients, 2004 - 2014



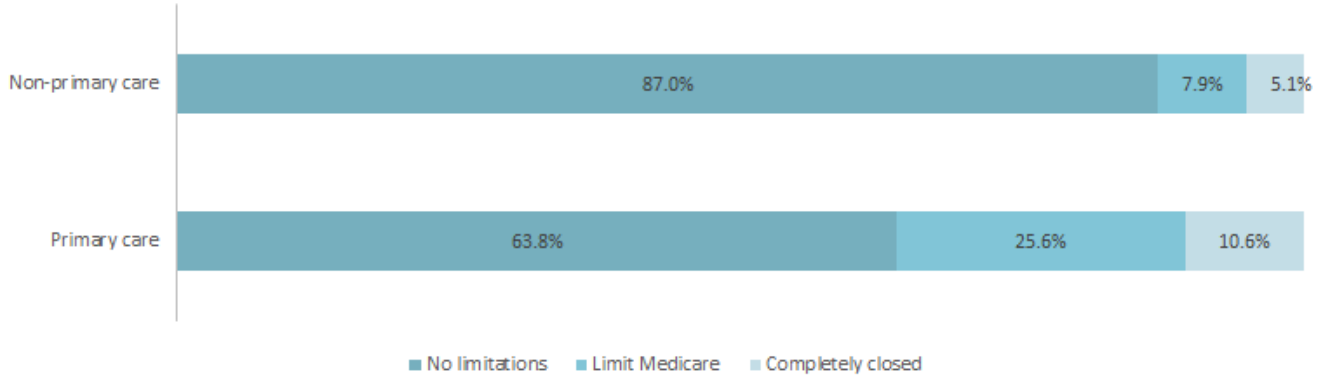
Those who reported that their practice was completely closed or were limiting acceptance of Medicare as a payer were also asked about the factors in their decision to limit Medicare. By far the most important factor identified was reimbursement level, followed by the need to balance payer mix, and then, administrative requirements (Figure 51). This is consistent with 2006 and 2009 results.

Figure 51: Factors in the decision to limit Medicare



As noted below, primary care physicians were more likely to restrict Medicare acceptance. Figure 52 compares primary care physician acceptance of new Medicare patients to non-primary care respondents.

Figure 52: Primary care vs. non-primary care acceptance of new Medicare patients



Commercial Insurance

Seven percent of the responding physicians reported that they were completely closed to commercial insurance. The pediatric and neurosurgical specialties are most likely to be open with no restrictions; family practice and psychiatry are most likely to limit commercial payers. About 11 percent of physicians worked in practices that restrict acceptance of new commercially-insured patients. (All figures exclude hospital-based specialties.)

Figure 53: Acceptance of new commercial insurance patients, 2004 - 2014

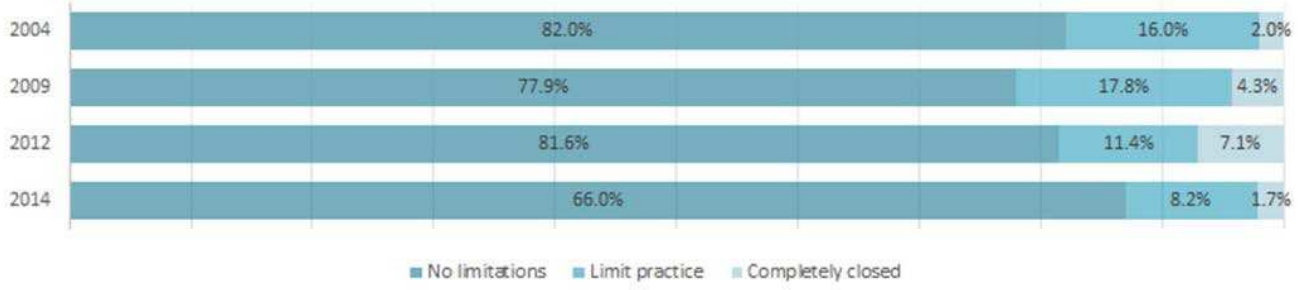


Figure 54: Acceptance of commercial insurance as a payer, by specialty

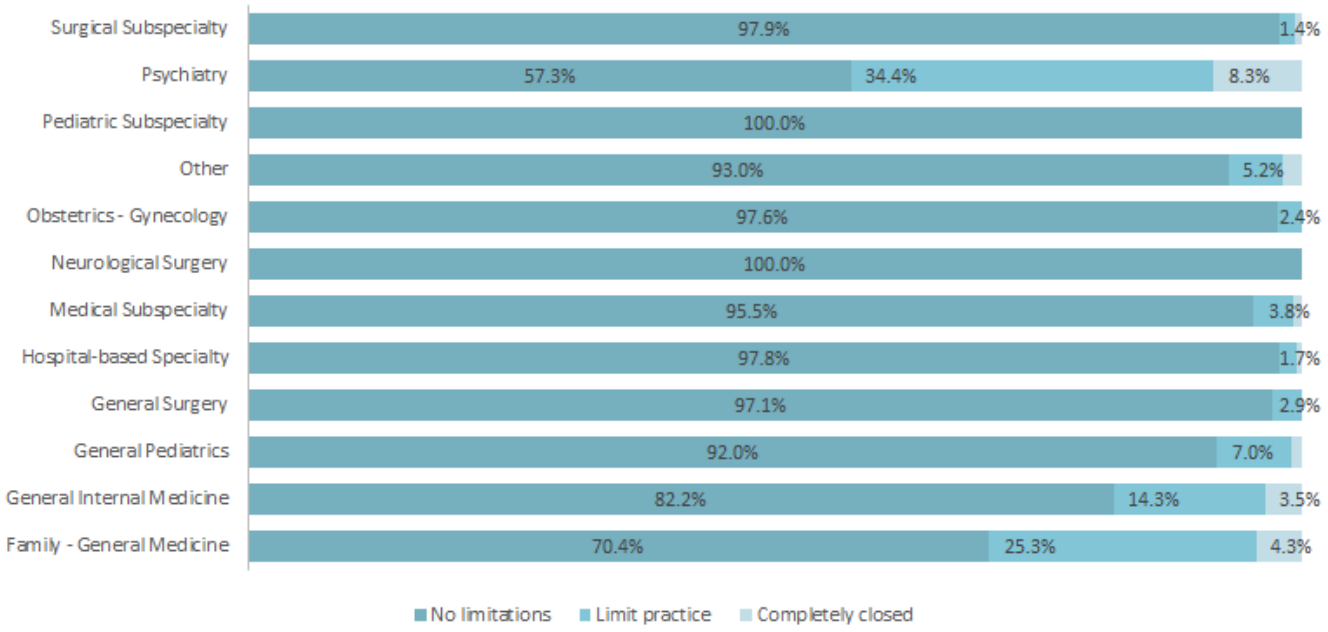

Figure 55: Acceptance of commercial insurance as a payer, by region

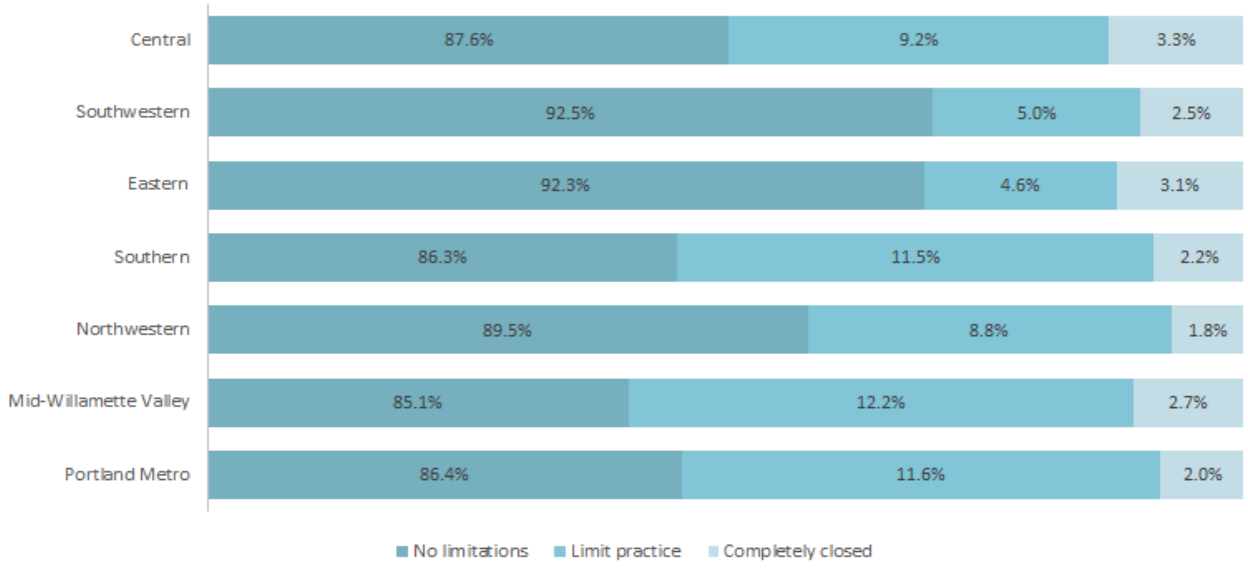

Figure 56: Acceptance of new commercial insurance patients, 2004 - 2014

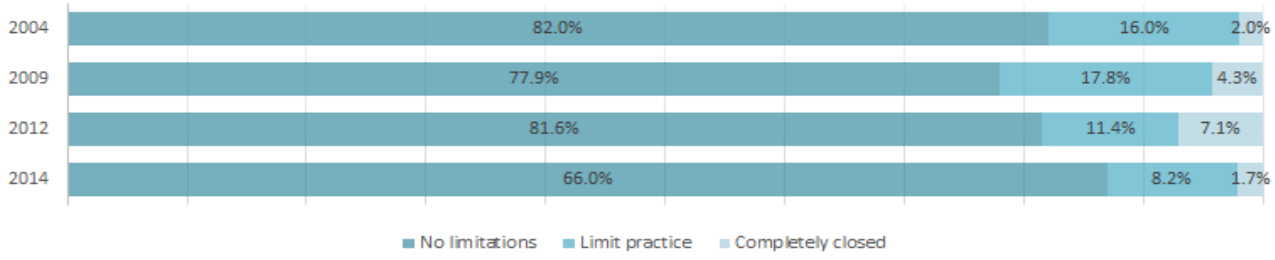

Figure 57: Primary care acceptance of new commercial insurance patients, 2004 - 2014

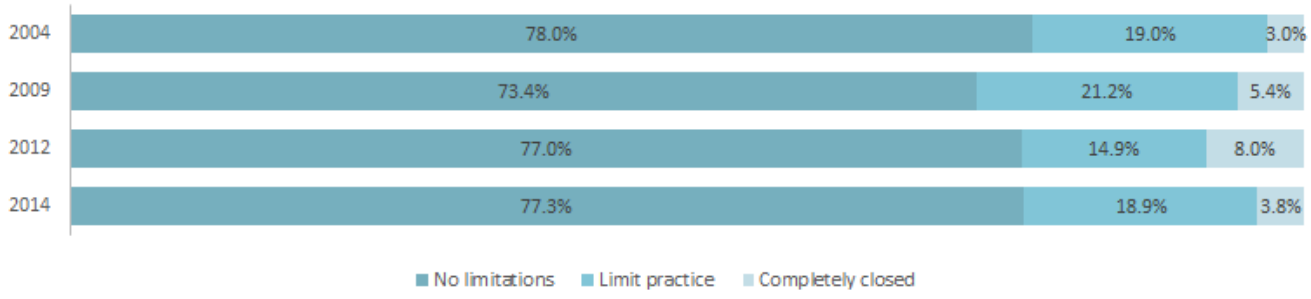

Figure 58: Factors in the decision to limit commercial insurance

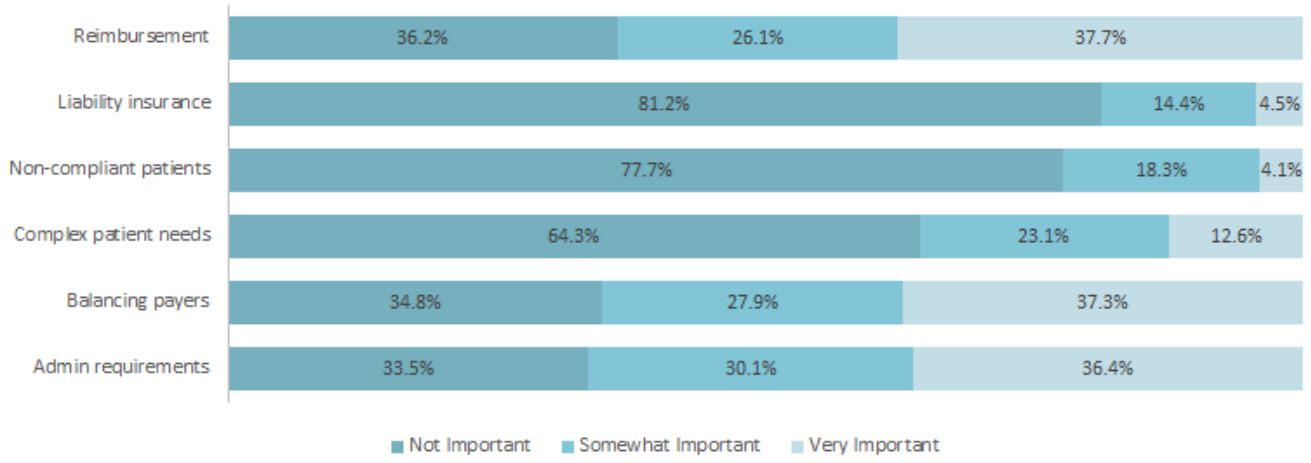

Figure 59: Primary care vs. non-primary care acceptance of new commercial insurance patients

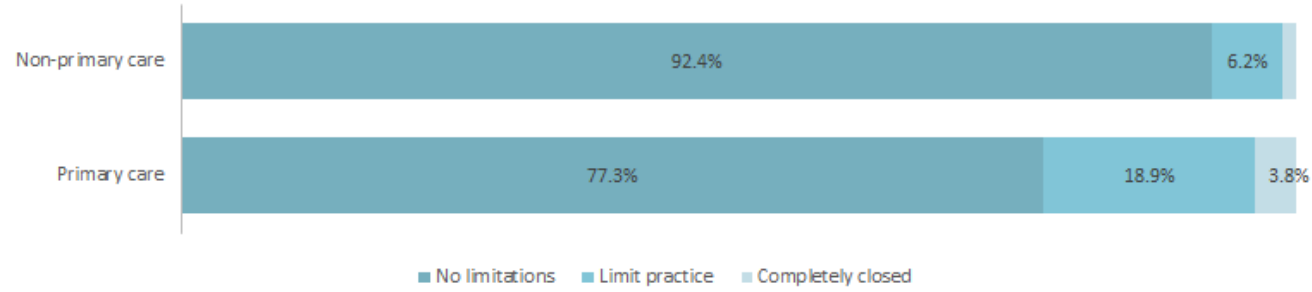

Worker's Compensation Insurance

About 60 percent of the responding non-hospital specialist physicians reported they were completely open to Worker's Compensation as a payer in 2014, and 28.1 percent reported being completely closed. Pediatric subspecialists and the neurosurgical specialty are most likely to be open with no restrictions.

Psychiatrists and OB/GYNs were most likely to restrict this payer as shown in Figure 60. Figure 61 also describes acceptance of Worker's Compensation by region.

Figure 60: Acceptance of Workers' Compensation as a payer, by specialty

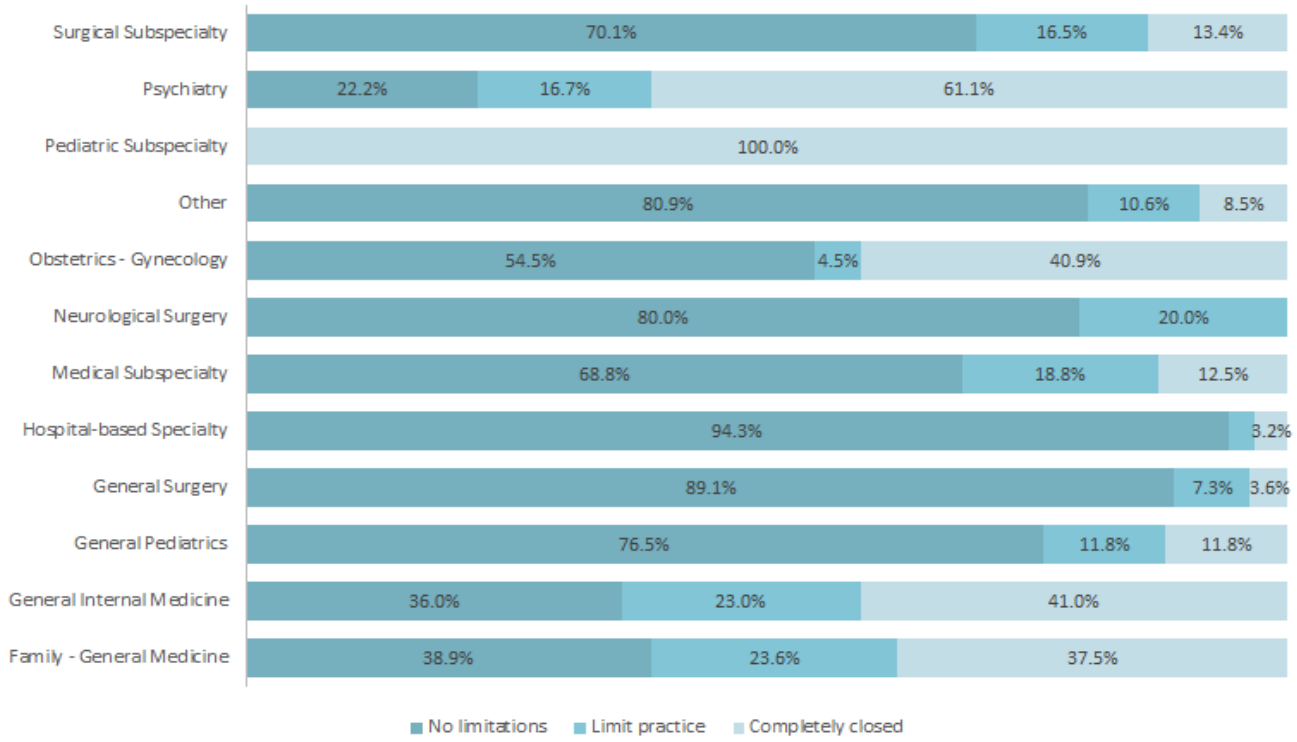

Figure 61: Acceptance of Workers' Compensation as a payer, by region

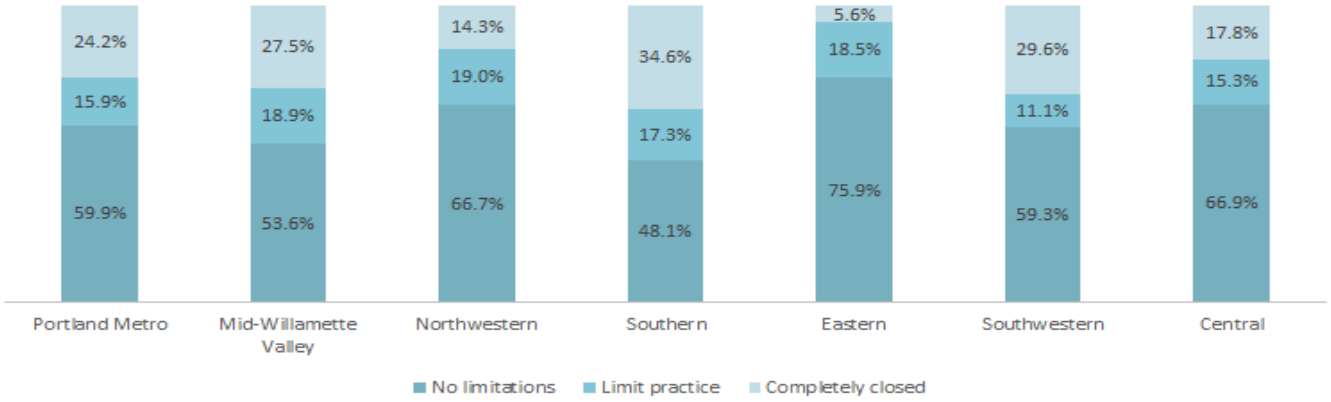

Figure 62: Factors in the decision to limit Workers' Compensation

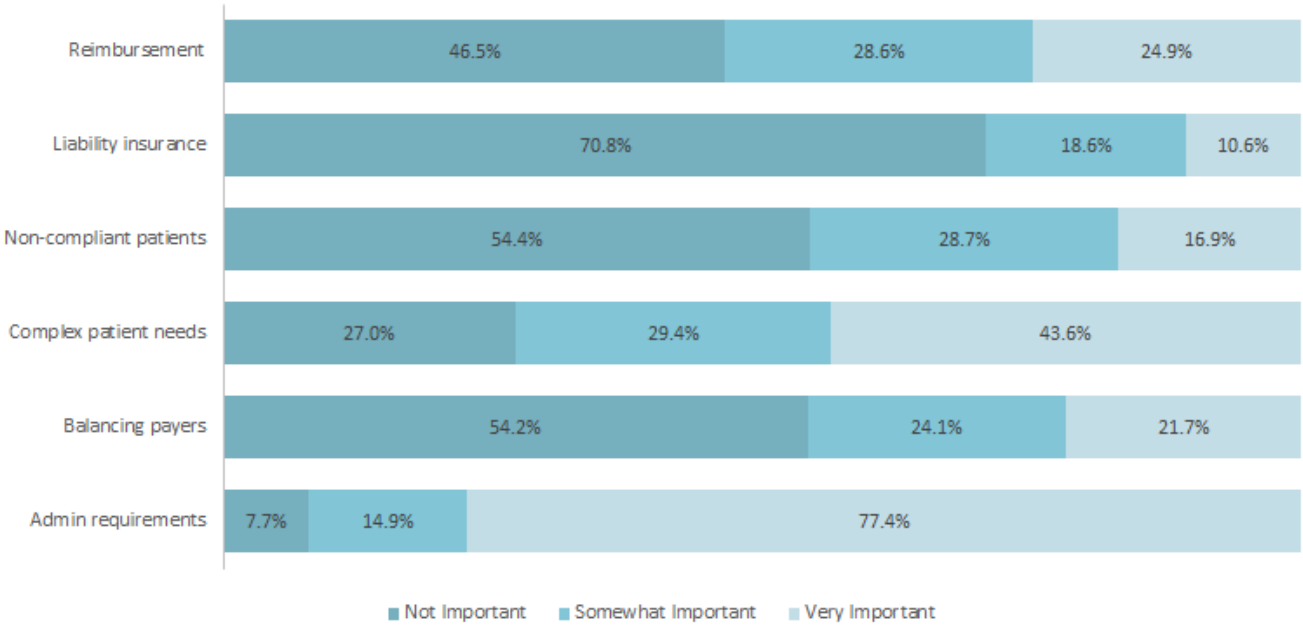

Medicaid

In 2014, 5.8 percent of respondents reported that they were completely closed to Medicaid, a notable decrease from 2009 (17.9 percent) and continuing to improve over 2006 when more than 20 percent of respondents reported full closure. An additional 21 percent of physicians were in practices that restrict acceptance of new Medicaid patients.

There is broad variation by specialty, with more than a 40 percent difference in the low and high ends of unlimited acceptance among specialties. Only 47.7 percent of psychiatrists and 59.2 percent of family/general medicine physicians accepted Medicaid as a payer without any limitations. The percentage of general internal medicine specialists reporting being completely open to new Medicaid patients has increased, from 42.2 percent in 2009 to 63 percent in 2014 (Figure 64). Figure 65 describes acceptance of Medicaid by region.

Figure 63: Acceptance of new Medicaid/OHP patients, 2006 - 2014

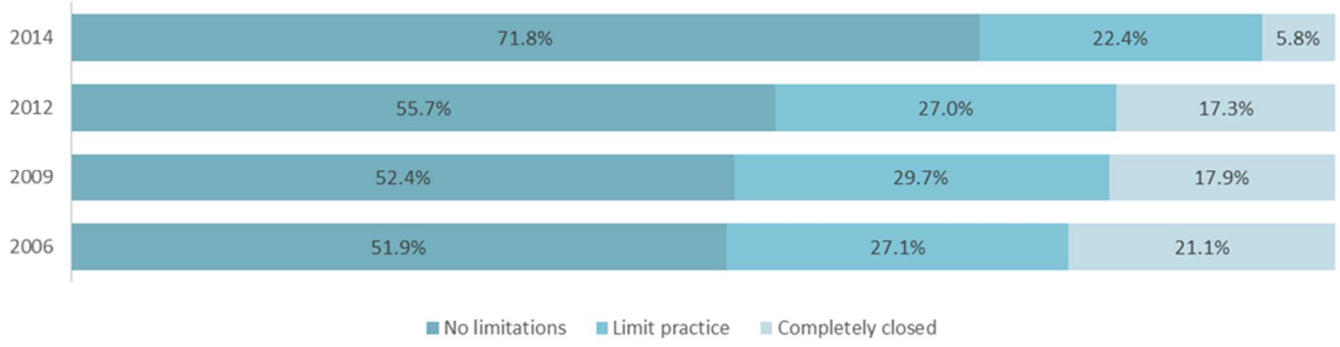

Figure 64: Acceptance of Medicaid by specialty

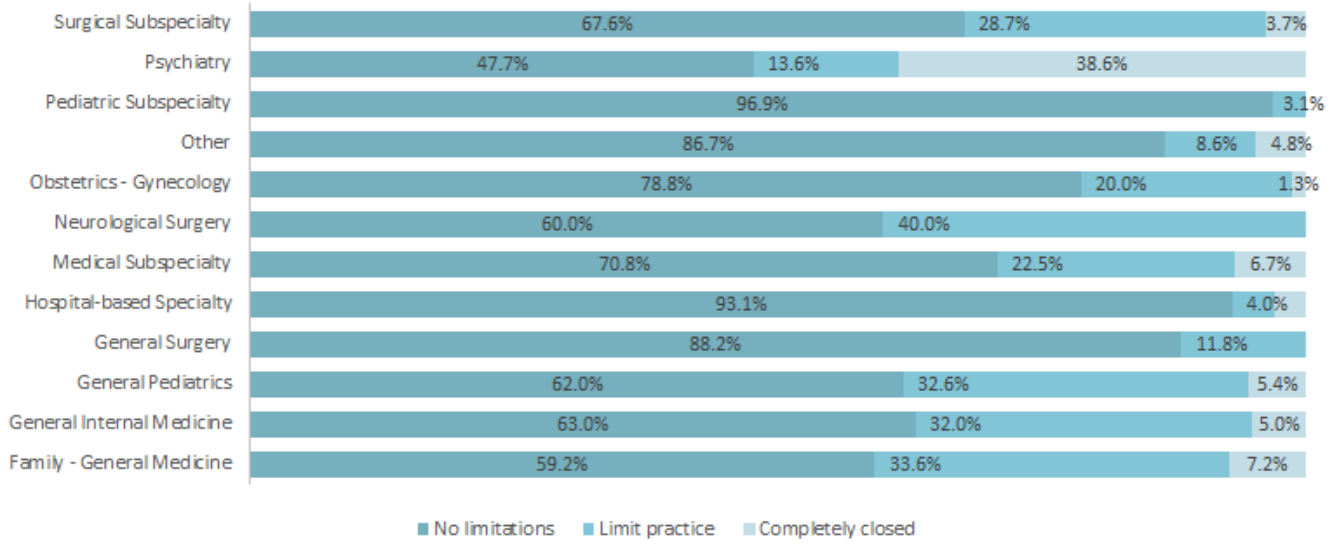

Figure 65: Acceptance of Medicaid by region

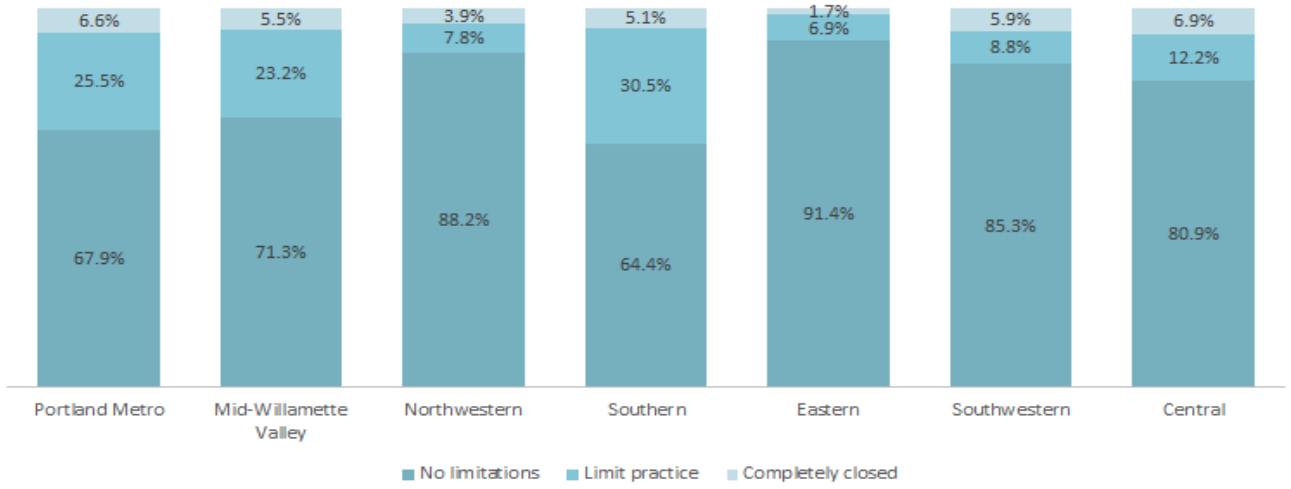

In 2014, the percentage of primary care physicians accepting new Medicaid patients with no limitations increased slightly over 2012. At the same time, the percentage of primary care physicians completely closed to new Medicaid patients decreased by more than 10 percentage points (Figure 66). Primary care acceptance of Medicaid/OHP improved over the last two surveys. The number that are accepting new Medicaid patients without limitation has increased by more than 12 percent and closed practices are reported by 7.8 percent fewer respondents over 2014, with the reportage of closed practices falling more than 20 percent since 2006.

Figure 66: Primary care acceptance of Medicaid/OHP, 2006 - 2014

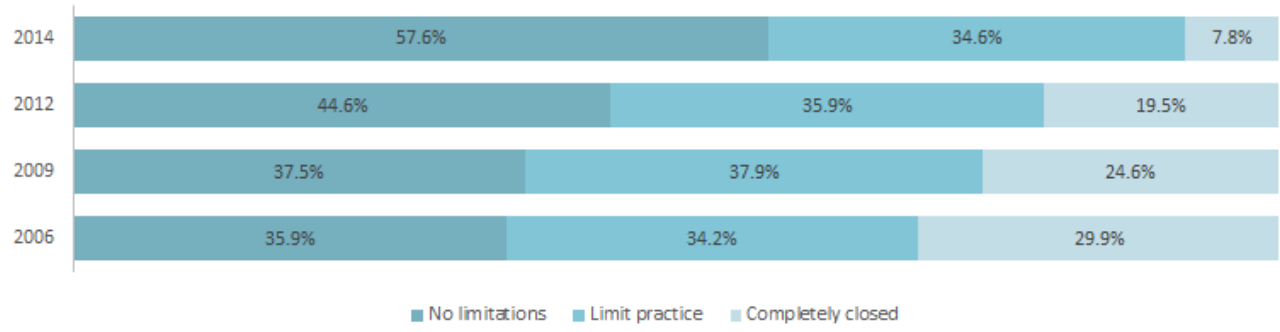

Figure 67: Primary care vs. non-primary care acceptance of Medicaid/OHP

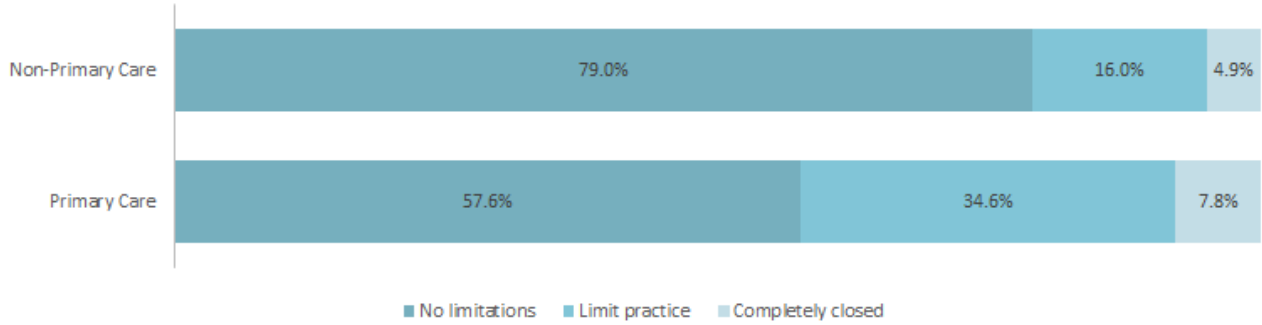

Figure 68: Reasons for not accepting Medicaid/OHP

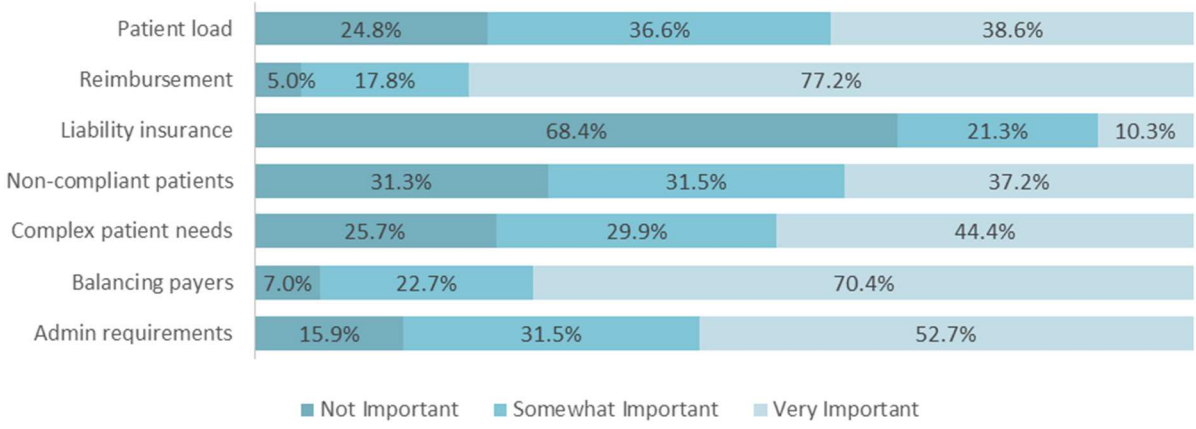

Access to services for Medicaid patients

Figure 69: How often are you able to refer to specialists?

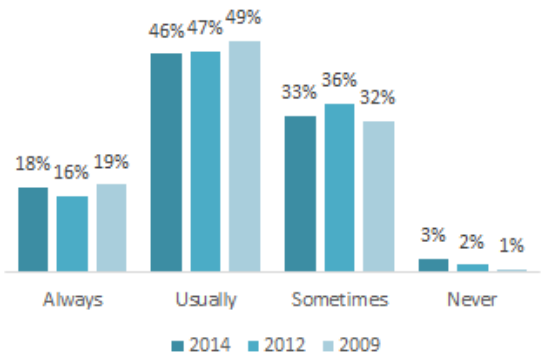

Figure 70: How often are you able to obtain ancillary services?

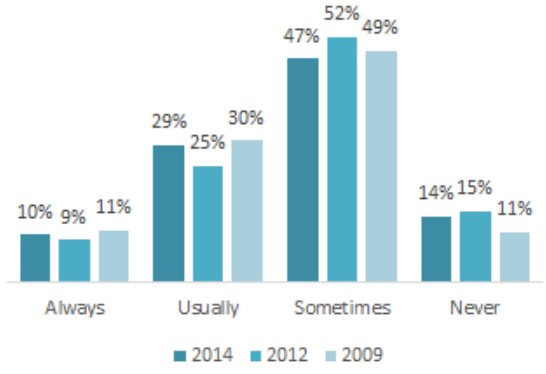

Figure 71: How often are you able to obtain a non-emergency hospital admission?

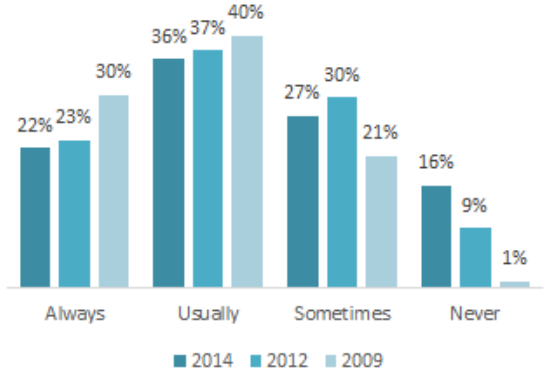

Figure 72: How often are you able to obtain diagnostic imaging services?

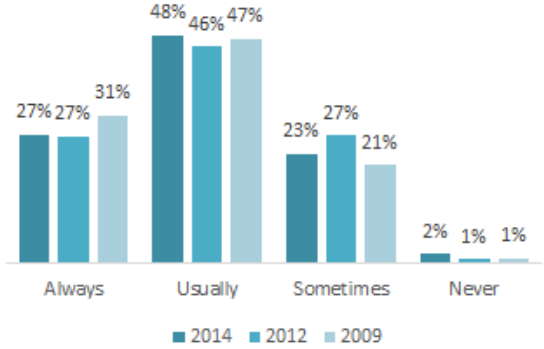

Figure 73: How often are you able to obtain inpatient mental health services?

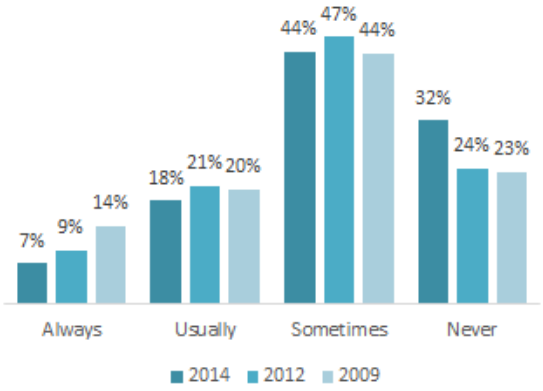

Figure 74: How often are you able to obtain inpatient substance abuse services?

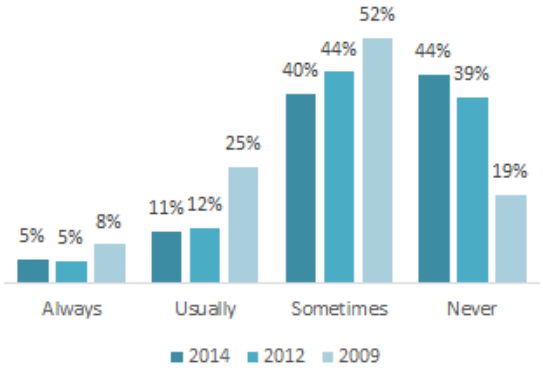

Figure 75: How often are you able to obtain outpatient mental health services?

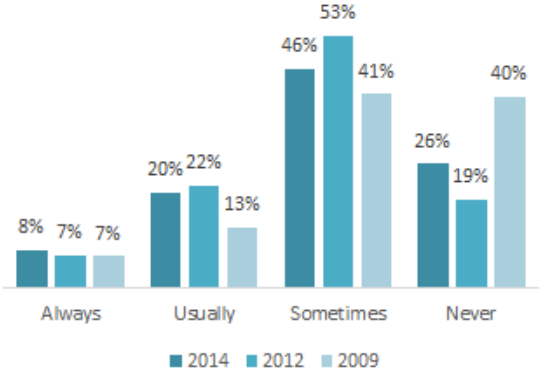

Figure 76: How often are you able to obtain outpatient substance abuse services?

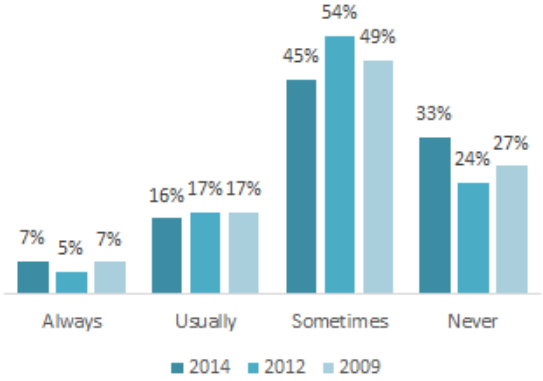
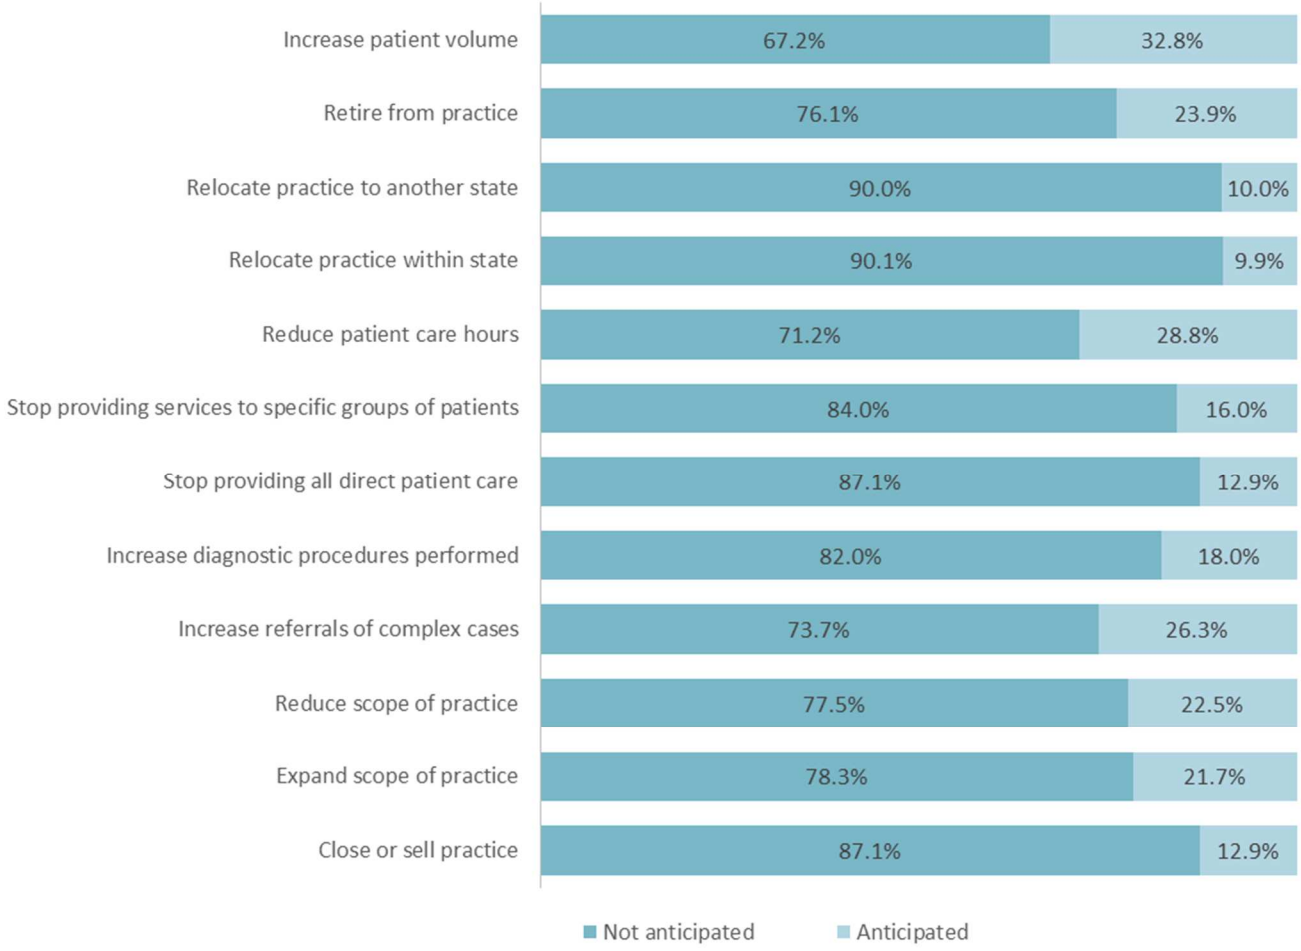


Anticipated Practice Changes

Figure 77 indicates the findings for 2014. Respondents ranked increasing patient volume, reducing patient hours, and increasing complex referrals as the top three likely changes. Nearly 13 percent would stop providing all direct care, and a similar number would close or sell their primary practice. These are increases over 2012.

Figure 77: Anticipated practice changes in the next two years

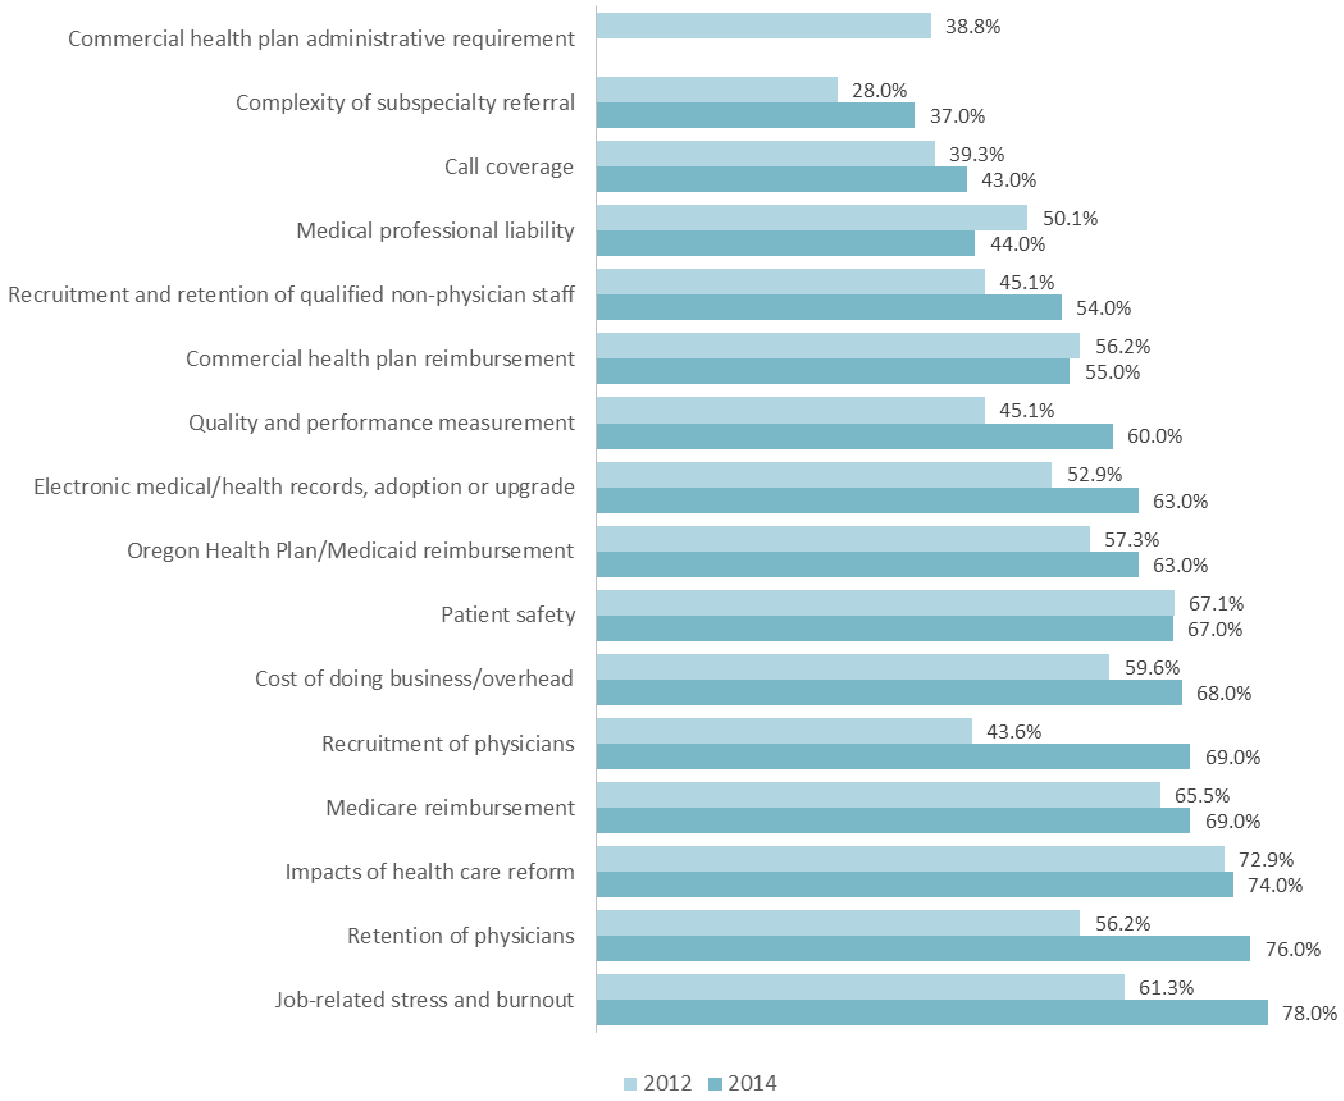


Healthcare Issues

Physicians were asked to rate the importance of issues related to the practice of medicine and health policy. Figure 78 exhibits the percentage of physician-respondents rating each of the issues as "very important." While most topics were repeated in 2009, 2012, and 2014, some were not. The figure below lists the issues based on the percentage saying the topic is "very important" the issue with the largest percent indicating it is very important is at the bottom.

In 2014, one trend emerged; business operational concerns declined, as more physicians became employees. However, job-related stress and burnout increased dramatically. Concerns about impacts of health care reform, and recruitment and retention of physicians were also among the top concerns. Concerns about quality and performance measurement, going from about 25 percent in 2009 to 60 percent in 2014.

Figure 78: Importance of health policy issues and issues related to the practice of medicine, 2012 - 2014



Oregon Medical Malpractice Reinsurance Program

About a third (33.5 percent) of physicians reported that they did not know whether they participated in the program. Six percent reported participation. See Appendix B for detailed data tables.

Rural Provider State Income Tax Credit Program

Responses to this question generally reflected the Malpractice Reinsurance program: 14.1 percent of respondents reported that they receive this tax credit.

Coordinated Care Organizations: Knowledge and Participation

2014 Oregon Physician Workforce Survey

November 2014

Dear Colleague:

This survey is the result of a collaboration between the Oregon Health Authority, the Oregon Medical Association, Oregon Medical Board, and the Workforce Institute. The goal of Oregon Physician Workforce Survey is to better understand your experience as a physician and your practice environment.

You can save results anytime and come back to it later. You can use the bar at the top of each page to track your progress. The actual survey on the web appears different from this report, there are many page breaks, and several questions are listed as tables instead of separate items.

Your responses are confidential. Once you complete the survey you will not be sent reminder notices. This survey uses a secure server and connection to protect your privacy and confidentiality. Only summary information is reported and does not include individual identifiers.

If you have any questions or concerns, feel free to contact me, Charles Gallia, at charles.a.gallia@state.or.us or (503) 884-3458

Does your professional time involve any direct patient care in Oregon?

{Choose one}

( ) Yes

( ) No

Have you retired?

{Choose one}

( ) Yes

( ) No

Physician Characteristics

When do you plan to retire?

(Mark only one.)

{Choose one}

( ) Within the next 2 years

( ) In the next 2 to 5 years

( ) More than 5 years from now

If your primary specialty is family medicine, general medicine, or ob/gyn, do you currently provide maternity care?

(Mark only one.)

{Choose one}

( ) Does not apply. I am not a family medicine, general medicine or ob/gyn practitioner.

( ) Yes, only prenatal and post partum care, not deliveries

( ) Yes, deliveries, as well as prenatal and post partum care

( ) No

Do you consider yourself a primary care physician?

{Choose one}

( ) Yes

( ) No

( ) Uncertain

Do you work as a hospitalist?

The balance between work and personal life
{Choose one}

( ) Satisfaction has increased
( ) No change
( ) Satisfaction has decreased

The amount of time you have with patients
{Choose one}

( ) Satisfaction has increased
( ) No change
( ) Satisfaction has decreased

Your ability to provide patients with the best possible care
{Choose one}

( ) Satisfaction has increased
( ) No change
( ) Satisfaction has decreased

How satisfied have you been with your medical career overall? (Mark only one.)
{Choose one}

( ) Very satisfied
( ) Somewhat satisfied
( ) Neither satisfied nor dissatisfied
( ) Somewhat dissatisfied
( ) Very dissatisfied

What is the greatest source of your professional satisfaction? (Mark only one.)
{Choose one}

( ) Intellectual challenge
( ) Clinical practice
( ) Income
( ) Patient interaction
( ) Practice environment
( ) Other (please specify) [ ]

Primary Practice Characteristics

Your primary practice setting is the location at which you spend the greatest amount of time in direct patient care.

Which of the following best describes your primary practice setting: (Mark only one.)
{Choose one}

( ) Private clinic or office
( ) Community clinic/public health clinic
( ) University/college health service clinic
( ) Hospital-based ambulatory care clinic
( ) Inpatient setting
( ) Emergency department
( ) Urgent care clinic
( ) Nursing facility
( ) Other (specify) [ ]

What is the zip code at your primary practice location?
{Enter text answer}
[97
]

What is the size of your primary practice? (Mark only one.)
{Choose one}

( ) 1 physician
( ) 2-3 physicians
( ) 4-9 physicians
( ) 10-13 physicians
( ) 14-19 physicians
( ) 20-29 physicians
( ) 30 or more physicians

How is your primary practice is organized: (Mark only one.)
{Choose one}

( ) Single-specialty practice
( ) Multi-specialty practice
( ) Other [ ]

What is your employment status at your primary practice? (Mark only one)
{Choose one}

( ) Full owner
( ) Part-owner (or shareholder)
( ) Employee
( ) Independent contractor
( ) Volunteer
( ) Other (specify) [ ]

Who is your employer...
(Mark only one)
{Choose one}

( ) an independent clinic
( ) a clinic affiliated with (but not owned by) a health system
( ) a clinic that is wholly owned by a health system
( ) a hospital
( ) a health system
( ) an agency that contracts with a health system or hospital

In a typical week, how many patients do you see in your primary practice setting?
(Your best estimate is fine. Mark only one.)
{Choose one}

( ) Does not apply
( ) 1 to 25 patients
( ) 26 to 50 patients
( ) 51 to 75 patients
( ) 76 to 100 patients
( ) 100 to 200 patients
( ) More than 200 patients

In a typical week, how many new patients do you see in your primary practice setting?
(Your best estimate is fine. Mark only one.)
{Choose one}

( ) None
( ) 1 to 25 new patients
( ) 26 to 50 new patients
( ) 51 to 75 new patients
( ) 76 to 100 new patients
( ) More than 100 new patients
( ) Does not apply

On average, how many calendar days are normally required to schedule a non-urgent appointment for new patients at your primary practice? (Your best estimate is fine. Mark only one.)
{Choose one}

( ) Same day
( ) 1 day
( ) 2 days
( ) 3 days
( ) 4 to 6 days
( ) 7 to 14 days
( ) 15 to 21 days

( ) 22 to 30 days
( ) 31 to 45 days
( ) 46 to 60 days
( ) More than 60 days

On average, how many calendar days are normally required to schedule a non-urgent appointment for established patients at your primary practice? (Your best estimate is fine. Mark only one.)
{Choose one}
( ) Same day
( ) 1 day
( ) 2 days
( ) 3 days
( ) 4 to 6 days
( ) 7 to 14 days
( ) 15 to 21 days
( ) 22 to 30 days
( ) 31 to 45 days
( ) 46 to 60 days
( ) More than 60 days

Do you determine which payers (insurers) your primary practice accepts?
{Choose one}
( ) Yes
( ) No

To what extent is your primary practice accepting new Medicare patients? (Mark only one)
{Choose one}
( ) No limitations, practice is open to all new Medicare patients.
( ) Accept new Medicare FFS, but not Medicare Advantage.
( ) Accept new Medicare Advantage, but not Medicare FFS.
( ) Limit both Medicare Advantage and Medicare FFS.
( ) Completely closed to all new Medicare patients.

How important was each of the following factors in the decision to limit or close your primary practice to new Medicare patients? (Mark one response for each row.)

Administrative requirements associated with Medicare
{Choose one}
( ) Not Important
( ) Somewhat Important
( ) Very Important

Need to balance payer sources
{Choose one}

( ) Sometimes
( ) Never
( ) Does not apply

Coordinate effectively with other health professionals who care for the same patients?
{Choose one}
( ) Always
( ) Usually
( ) Sometimes
( ) Never
( ) Does not apply

The Oregon Health Authority is working with Coordinated Care Organizations (CCOs) to provide health services for people insured by Medicaid. How much do you know about CCOs?
(Mark one)
{Choose one}
( ) Nothing
( ) Very Little
( ) Some
( ) A Great Deal

Does your practice, medical group, or employer, contract with a CCO to provide care to Medicaid patients?
{Choose one}
( ) No
( ) Yes
( ) Don't Know

Does your practice have formal medical home recognition?
{Choose all that apply}

( ) Yes
( ) No
( ) Don't know

Is your practice currently seeking medical home recognition?
{Choose one}

( ) Yes
( ) No

Which organization granted recognition?
{Choose all that apply}

( ) National Committee for Quality Assurance: Patient-centered medical home
( ) Oregon Health Authority: Patient-centered Primary Care Home
( ) Don't know
( ) Yes, other (please specify) [ ]

Do you or your clinic receive additional compensation from insurers as a result of this recognition?
{Choose one}

( ) No
( ) Yes
( ) Don't Know
( ) Yes, both my clinic and I receive additional compensation
( ) Yes, I personally receive additional compensation, but the clinic as a whole does not
( ) Yes, the clinic receives additional compensation, but I personally do not receive additional compensation
( ) Does Not Apply
( ) Other [ ]

Physician Time

Charity care, as defined here, is care for which, because of financial need, you charged either no fee or a reduced fee. It does NOT include time spent providing services for which you expected, but did not receive, payment, and it does NOT include time spend providing services under discounted fee contracts or to Medicare or Medicaid clients.

In a typical month, about how many hours do you spend providing charity care? (Your best estimate is fine. Mark only one.)
{Choose one}

( ) No charity care hours
( ) 1-10 hours
( ) 11-20 hours
( ) 21-30 hours

( ) 31-40 hours
( ) More than 40 hours
( ) Don't know

About Your Profession

Do you currently receive the Oregon Medical Malpractice Reinsurance Program (also known as the Medical Malpractice Insurance Subsidy)? (Mark only one.)
{Choose one}
( ) Does not apply. Not a rural practice.
( ) Yes
( ) No
( ) Don't know.

Do you currently participate in the Rural Provider State Income Tax Credit Program?
{Choose one}
( ) Does not apply. Not a rural practice.
( ) Yes
( ) No
( ) Don't know.

About Your Profession

If Medicare reimbursement for physicians declines, which of the following actions will you take?
(Mark only one.)
{Choose one}
( ) Will accept all new Medicare patients
( ) Will limit acceptance of new Medicare patients
( ) Will not accept any new Medicare patients
( ) Will drop all Medicare patients
( ) Undecided

How often are you able to obtain access to the following for your patients with serious persistent mental illness when you think it is medically necessary? (Mark one response for each row.)

Referral to specialists (if you are a specialist, referral to other specialists)
{Choose one}
( ) Always
( ) Usually
( ) Sometimes
( ) Never

( ) Doesn't apply/don't know

Ancillary services such as physical therapy, home health, etc.
{Choose one}
