

Proposed definition of Primary Processing of Forest Products

RAC Subcommittee - January 9, 2015

Primary processing of forest products means the initial treatment of logs or other forest materials in preparation for further processing or shipment to market. Treatment may include: debarking, peeling, drying, chipping, grinding, sawing, shaping, notching, torrefaction or other similar methods of initial treatment consistent with the aforementioned examples or accessory to the production of primary forest products. Primary forest products may include: whole tree logs, sawlogs, firewood, pulpwood, chips, shavings, posts, poles, piling, shakes, shingles, hog-fuel, bio-char and other products of a similar nature.
