PROJECT DESCRIPTION

Complete Phase II of the Transit Operations Center by constructing two bus barns.

PURPOSE AND NEED

The project will provide the necessary space to store, maintain, and protect the City’s transit fleet as well as two Clackamas County Mountain Express vehicles. The transit fleet serves as a critical link in the regional transit system, connecting the rural communities of Sandy, Eagle Creek, Estacada, and Oregon City to the south; the Mt. Hood Villages to the east; Gresham and Portland to the west. The fleets also provide a safe, efficient and effective, low-cost travel option.

PROPOSED SOLUTIONS

- Construct a 6-bay carport structure
- Address water drainage issues by the vertical boundary on the west side of the parcel
- Pave unpaved sections of the parking lot in front of new building

ANTICIPATED BENEFITS

- Store, protect, and provide an area to maintain the transit fleet that:
 - Improve mobility between rural communities and connect them to the greater Portland metropolitan region
 - Provide direct access to work, services, and educational and recreational opportunities and activities

ARTISTIC RENDERING OF BUS BARN
