

# Project Description

After an extensive public process, ODOT and the Port have selected a Preferred Alternative to address congestion at the Airport Way Interchange. The project will:

- Create a new free-flowing right-turn ramp from westbound Airport Way to northbound I-205.
- Give eastbound drivers turning left to I-205 north at the intersection two turn lanes – they will no longer have to share signal time with westbound to northbound right-turning vehicles.
- Reduce the traffic queue from right-turning traffic that regularly blocks left turning vehicles from entering the northbound ramp.
