Patricia Whitfield, Oregon State Police

Paul Bellatty, Oregon Youth Authority

# FOREWORD

In July 2013 the Oregon Legislature passed House Bill 3194, known as the Justice Reinvestment Act<sup>1</sup>. Section 45 of HB 3194 (codified in ORS 423.557) redefines recidivism for Oregon, to include the arrest, conviction, or incarceration for a new crime or for any other reason. This report provides the first statewide analysis to include the new definition of recidivism for any new crime.

The Criminal Justice Commission (CJC) has taken the lead on this effort, working with the Department of Corrections, the Oregon Judicial Department, and the Oregon State Police to gain access to available data and to merge the multiple data sets. However, there are resource and technological limitations with the analysis and data available for this report. Where we encountered limitations we tried to document them so as to make this report as transparent and useful as possible.

Ultimately, we study recidivism so we can determine if the interventions that we are deploying throughout the state are successful in keeping offenders from returning to criminal behavior. With that goal in mind, we at CJC will continue to work with our state and county partners to explore ways to improve our ability to capture the data accurately and timely, and to explore new ways to analyze and examine the data that may continually shed new light on how successful we are at achieving our shared public safety goals.

The Oregon Statistical Analysis Center, housed within the CJC, plans to update this analysis every six months, to continue to track the new measures of recidivism in Oregon. We will release the updated reports on our website, and also via email to interested parties. The CJC would like to thank our agency partners at the Department of Corrections, the Oregon Judicial Department, and the Oregon State Police for their support and input on this report.

Mike Schmidt, Executive Director  
Criminal Justice Commission

---

## Executive Summary

Historically, recidivism in Oregon has been tracked with a single definition: a new felony conviction within three years of release for incarceration or imposition of probation. Criminal justice stakeholders are well versed in this recidivism definition, and some are in the habit of referencing a single recidivism number from memory based on the latest recidivism analysis. The new definition essentially provides three measures of recidivism, and a richer context for recidivism analysis. Developing the analysis necessary to report recidivism using this new definition requires the merging of multiple criminal justice data systems on a scale never achieved before in Oregon.

Many factors can impact recidivism rates such as law enforcement resources and other criminal justice system resources, the risk profile of individuals in the system, changing emphasis on arrests or prosecutions, as well as the use of evidence based programs. This analysis does not attempt to explain why recidivism rates have changed over time, but simply displays the recidivism rates for offenders released from incarceration or sentenced to felony probation statewide and county by county.

This analysis shows the current statewide rates of recidivism:

For those released from prison or from a felony jail sentence in the first six months of 2011:

- 16% were re-incarcerated for a new felony crime within three years of release,
- 39% were convicted of a new misdemeanor or felony crime within three years of release, and
- 52% were arrested for a new crime within three years of release.

For those who started a felony probation sentence in the first six months of 2011:

- 12% were incarcerated for a new felony crime within three years,
- 40% were convicted of a new misdemeanor or felony crime within three years, and
- 46% were arrested for a new crime within three years.

## Background

HB 3194 Section 45 (2013) (codified in ORS 423.557) provides a new statewide definition of recidivism. The definition includes the arrest, conviction, or incarceration for a new crime or for any reason.

The analysis in this report will focus on recidivating events for “new crimes”; it does not include recidivating events that occur for “any reason”<sup>2</sup>. Recidivating events that occur for any reason include arrests or incarcerations for supervision revocations or sanctions.

Historically, the Oregon Department of Corrections (DOC) and the Oregon Youth Authority (OYA) defined recidivism as a felony conviction within three years of release from incarceration or imposition of probation. The data sources available to DOC and OYA allowed for tracking this measure of recidivism. The agencies did not have access to the necessary data systems to track a broader definition of recidivism, which would require access to raw data from the Oregon Judicial Department and Oregon State Police.

For many years the Oregon Statistical Analysis Center (SAC), housed at the Oregon Criminal Justice Commission (CJC), has had access to statewide data systems. The SAC serves as a clearing-house of criminal justice data, and has expanded its capacity in terms of data available and also in techniques to merge data across different systems.

The recidivism analysis in this report is the first comprehensive statewide analysis using the definition of adult recidivism in HB 3194 (codified in ORS 423.557). Although there are limitations with the current available data, this analysis includes arrest, misdemeanor and felony conviction, and incarceration data in a single recidivism analysis.

## Definitions and Limitations

DOC tracks recidivism for offenders starting felony probation and for offenders starting post-prison supervision or parole supervision in six month cohorts<sup>3</sup>. This analysis uses these same cohorts as the starting population to track recidivism.

The CJC combined data from DOC with circuit court case data from the Oregon Judicial Department (OJD), as well as arrest data from Oregon State Police (OSP) to track the three components of the new definition of recidivism in HB 3194 (codified in ORS 423.557).

This analysis provides historical information back to the first offender cohort in 1998 and is current through the first cohort of 2011. This provides historical data to track trends for the new definition of recidivism, and establishes a new baseline for future recidivism analysis. In the past a single definition of recidivism was tracked, which was a new felony conviction within three years of release from incarceration or imposition of probation.

As with past statewide recidivism analyses, this data does not include federal or out of state data. New criminal activity must be entered into electronic data systems in order to be captured as a recidivating event. If new criminal activity is handled informally, and is not entered into an electronic data system, then it is not captured as a recidivating event in this analysis.

---

<sup>2</sup> SB 366 is currently under consideration by the Oregon Legislature. This bill removes the language that includes recidivating events that occur for any reason. <https://olis.leg.state.or.us/liz/2015R1/Downloads/MeasureDocument/SB366/Introduced>

<sup>3</sup> See appendix for full cohort definitions. A Parole-PPS cohort is comprised of all individuals release to parole or PPS in a six month period. A probation cohort is comprised of all individuals sentenced for the first time to felony probation during a six month period.

The three components (incarceration, conviction, arrest) of this new recidivism analysis are tracked separately. A single offender can contribute to all three measures, or a subset depending on the criminal justice system's response to the new criminal activity committed.

### Incarceration

Incarceration data is available from DOC and includes felony prison and felony jail sentences. The incarceration data includes felony incarceration sentences only and does not include misdemeanor jail sentences or jail time served pre-trial. Oregon does not have a statewide data system that provides misdemeanor jail sentence information by conviction or county, and therefore misdemeanor incarceration data at the statewide level is not available. The incarceration rate presented shows the percentage of each cohort incarcerated for a new crime within three years of release from incarceration or imposition of probation. Multiple incarceration events are not accounted for. The analysis captures whether an offender was or was not incarcerated within three years of release from prison or imposition of probation.

### Conviction

Conviction data available from OJD includes data from the legacy Oregon Judicial Information Network (OJIN) and the new Odyssey case management systems. Oregon's 36 circuit courts are in the midst of a multi-year business transformation project converting from OJIN to Odyssey. At the time of this analysis there were 11 counties using Odyssey and 25 counties using OJIN; see the appendix for details.

This data includes misdemeanor and felony convictions from Oregon's 36 circuit courts. It does not include convictions from municipal courts or justice courts, as those courts are not part of the unified state court system. An extensive data merging process was done for entries in OJIN and Odyssey where the SID number is missing; see the appendix for details.

The conviction rate presented shows the percentage of each cohort convicted for a new misdemeanor or felony crime within three years of release from incarceration or imposition of probation. Multiple convictions are not accounted for. The analysis captures whether an offender was or was not convicted of a new crime (misdemeanor or felony) within three years of release from incarceration or imposition of probation.

### Arrest

Arrest data is available from OSP's Law Enforcement Data System (LEDS). This data includes arrests where the person was finger-printed. It does not include arrests where the person was not finger-printed or other types of law enforcement contact not resulting in arrest. Fingerprinting is required in arrests for all felony crimes, and for misdemeanor drug and sex crimes. The arrest rate presented shows the percentage of each cohort arrested for a new crime within three years of release from incarceration or imposition of probation. Multiple arrests or multiple arrest charges are not included. The analysis captures whether an offender was or was not arrested for a new crime within three years of release from incarceration or imposition of probation.

## Statewide Analysis

Graph 1 below shows the three recidivism measures for the parole and post-prison supervision (PPS) cohorts from 1998 to the first cohort of 2011. DOC defines cohorts of all individuals released to parole or PPS during a six month time period. In this 13 year time frame each recidivism measure shows a slightly declining overall trend from about 2000 and on. The incarceration rate varies from a low of about 13% in 1998 to a high of nearly 19% in 2004. For the first cohort of 2011 the incarceration rate was 15.5%. The conviction rate varies from a low of nearly 37% in 2009 to a high of 46% in 1999. The conviction rate for the first cohort of 2011 was nearly 39%. The arrest rate varies from a low of nearly 49% in 1998 to a high of nearly 58% in 2000. The first cohort of 2011 shows an arrest rate of 52%.

Graph 2 below shows the three recidivism measures for the probation cohorts from 1998 to the first cohort of 2011. DOC defines the probation cohorts as comprising all individuals sentenced for the first time to felony probation during the six month period. Individuals sentenced to misdemeanor probation only are not included in the cohort. In this 13 year time frame the conviction and arrest measures shows a declining overall trend from about 2005 on, while the incarceration measure has been fairly flat. The incarceration rate varies from a low of about 9% in 2009 to a high of 13% in 2005. For the first cohort of 2011 the incarceration rate was 12%. The conviction rate varies from a low of nearly 37% in 2008 to a high of 49% in 1998. The conviction rate for the first cohort of 2011 was 40%. The arrest rate varies from a low of nearly 37% in 2008 to a high of 49% in 1998. The arrest rate for the first cohort of 2011 was 46%.

## Appendix

### Department of Corrections Cohorts

The Department of Corrections defines the Parole-PPS cohort as comprising all individuals released to parole or PPS during a six month period. It excludes those released from prison following a revocation from parole/PPS. Inmates initially released on temporary or transitional leave are also included as of their parole or PPS date.

The Department of Corrections defines the probation cohort as comprising all individuals sentenced for the first time to felony probation during the six month period. Some offenders may have been sentenced to probation more than once. Each new probation admission is considered a separate case. The cohort does not include offenders sentenced to felony bench or court probation who are not supervised by a county community corrections department.

The cohort definitions are separated by county, to allow for county level analysis. To prevent a single individual from being included in multiple counties, DOC defines a county's release cohort as individuals under the county's supervision at the end of the three year period following release from incarceration. A county's probation cohorts are defined as offenders under the county's supervision at the end of the three year period following admission to probation.

### Incarceration

The incarceration recidivism measure is compiled from the Department of Corrections data and includes prison sentences and felony local control sentences for a new crime. It typically does not include a jail sentence without any subsequent supervision, which is rarely used as a sentencing option for offenders. It does not include misdemeanor jail sentences, or jail time served pre-trial. Oregon does not have a statewide jail data system, and jail sentences in the circuit court case data are incomplete at the statewide level.

### Conviction

The conviction recidivism measure is compiled from data collected by the Oregon Judicial Department (OJD) from both OJIN (Oregon Judicial Information Network) and Odyssey. These datasets provide misdemeanor and felony conviction data from Oregon's 36 circuit courts. For records where a SID (State Identification) number is missing, an extensive data merging process was followed to match records on name and date of birth; see the Data Merging Methodology section below.

The Oregon Judicial Department (OJD) transmits criminal case data using a secure file transfer to the Criminal Justice Commission (CJC) upon request. The CJC makes such a request of the OJD on approximately a quarterly basis. The data transmitted to the CJC includes information on:

- The defendant, such as the defendant's name, date of birth, address, demographic information (gender, race, etc.), driver license number, SID number, fingerprint and control number;
- The case event(s);
- The charge(s);
- Disposition of charge(s); and
- Sentence(s) imposed by the court.

This data is only from cases filed in circuit courts. The OJD sends data on all – not just new – cases every time data is sent to the CJC. OJD does not have access to information on cases filed in justice or municipal courts, as OJD does not have administrative control over those courts.

The OJD is currently in the middle of a significant information technology project: – Oregon eCourt. Oregon eCourt involves an integrated system that includes electronic filing, case management, document access, and ePayment. As part of Oregon eCourt, circuit courts are transitioning from the Oregon Judicial Information Network (OJIN) to a new case management system, Odyssey. By June 2016, all circuit courts will have transitioned to Odyssey. Information provided to courts through OJIN utilizes a case number-based system. Under Oregon eCourt, all case information will be digitally organized by a person's name or names.

## **Arrest**

Arrest data is available from the Law Enforcement Data Systems (LEDS) maintained by Oregon State Police (OSP). This includes arrests where the person was fingerprinted. It does not include arrests where the person was not fingerprinted or other types of law enforcement contact not resulting in arrest. Fingerprinting is required in arrests for all felony crimes, and for misdemeanor drug and sex crimes. Some law enforcement agencies fingerprint more arrests than are required, but the minimum should include the required crimes. OSP collects a bio-metric identifier, or fingerprint record, for all arrest records entered into LEDS. Unfortunately, arrest records are not separated into misdemeanor or felony crimes.

## **Data Merging Methodology**

The majority of data merging across the different data systems used in the analysis was done using the SID number. The DOC data includes a SID number for all records. The LEDS data also includes a SID for all records, and is the source of the SID number creation by linking each SID with finger-print records on file at OSP. The court case data needed a more complex data merging process due to missing SID numbers in the records. If the SID number was included in OJIN, then the same SID number matching was used. For entries where the SID number was missing, name and date of birth matching was used.

## **OJIN**

At the time of analysis there were 25 counties using the OJIN data system. The OJIN counties were Baker, Clackamas, Coos, Curry, Deschutes, Douglas, Gilliam, Grant, Harney, Hood River, Josephine, Klamath, Lake, Lane, Lincoln, Malheur, Marion, Morrow, Sherman, Umatilla, Union, Wallowa, Wasco, Wheeler, and Washington. The SID number in OJIN was missing for 24% of felony and misdemeanor conviction records. For these entries name and date of birth matching was used. Alias names and dates of birth were compiled, and these were used to match records where the SID number was missing. A test matching scenario was run on the 2010 cohorts. The name and date of birth matching using all aliases available resulted in 2.1% fewer matched entries than the SID number matching. This is likely due to name changes that are not entered as alias names, or data entry errors in the name and date of birth fields in OJIN.

The tables below show the percentage of misdemeanor and felony conviction records missing a SID by county and case year. The first table shows misdemeanor and felony convictions cases from 1998 to 2013 in total, and broken down by county. The rate of missing SID numbers in the records varies widely by county. The following table shows misdemeanor and felony conviction cases by year, and the rate of missing SID numbers has decreased over time.

**OJIN Misdemeanor and Felony Conviction Records with a Missing SID Number (1998 - 2013)**

<b>County</b>	<b>Total Misdemeanor and Felony Conviction Cases</b>	<b>Total Misdemeanor and Felony Conviction Cases with a Missing SID</b>	<b>% of Records Missing a SID Number</b>
Baker	3435	517	15.1%
Clackamas	92492	28403	30.7%
Coos	29678	9701	32.7%
Curry	11741	2783	23.7%
Deschutes	68155	15288	22.4%
Douglas	37143	7149	19.3%
Gilliam	757	106	14.0%
Grant	2811	309	11.0%
Harney	2122	291	13.7%
Hood River	8868	2905	32.8%
Josephine	41507	5331	12.8%
Klamath	37447	8904	23.8%
Lake	4610	850	18.4%
Lane	114313	34681	30.3%
Malheur	15115	1792	11.9%
Marion	132905	28991	21.8%
Morrow	2251	645	28.7%
Sherman	1520	438	28.8%
Umatilla	30183	6754	22.4%
Union	11940	2769	23.2%
Wallowa	2223	904	40.7%
Wasco	12200	5291	43.4%
Wheeler	303	99	32.7%
Washington	140026	28758	20.5%

**Statewide OJIN Misdemeanor and Felony Conviction Records with a Missing SID Number**

<b>Year</b>	<b>Total Misdemeanor and Felony Conviction Cases</b>	<b>Total Misdemeanor and Felony Conviction Cases with a Missing SID</b>	<b>% of Records Missing a SID Number</b>
1998	47902	16079	33.6%
1999	45342	15723	34.7%
2000	47546	15037	31.6%
2001	48727	14197	29.1%
2002	50076	14039	28.0%
2003	48097	14111	29.3%
2004	50217	10611	21.1%
2005	51533	10594	20.6%
2006	50302	15348	30.5%
2007	50444	10778	21.4%
2008	48650	9185	18.9%
2009	49893	12163	24.4%
2010	49171	10310	21.0%
2011	49738	9455	19.0%
2012	46942	6970	14.9%
2013	42895	5145	12.0%

**Odyssey**

At the time of analysis there were 11 counties using the Odyssey data system. The Odyssey counties were Benton, Clatsop, Columbia, Crook, Jackson, Jefferson, Linn, Multnomah, Polk, Tillamook, and Yamhill. The Odyssey data extract that the CJC receives from OJD currently does not include the SID number or the day for the date of birth. For Odyssey records matching were done on the first name, last name, month of the date of birth, and year of the date of birth. Alias names and dates of birth were compiled, and these were used to match the Odyssey records. A test matching scenario was run on the 2010 cohorts. The matching technique using the first name, last name, month of the date of birth, and year of the date of birth resulted in an additional 1.5% matched entries than the matching technique using the full name and date of birth. This is likely due to common names that are over-matched using this method.

# Recidivism Rates Statewide

Statewide Parole-PPS Recidivism Rates							
Cohort	Cohort Size	Arrest for a New Crime within 3 Years of Release		Conviction for a New Crime within 3 Years of Release		Incarceration for a New Felony Crime within 3 Years of Release	
		Number Arrested	Percent Arrested	Number Convicted	Percent Convicted	Number Incarcerated	Percent Incarcerated
1998\1st	1973	977	48.5%	749	38.7%	254	12.9%
