Quarterly Treatment Outcomes Report

Outpatient Services

Background

This is a quarterly report of treatment outcomes from the Client Process Monitoring System (CPMS) for persons that ended outpatient treatment for a Substance Use Disorder (SUD). Many more people were served in outpatient treatment programs, but the outcomes are based on specific measures assessed at the end of an episode of treatment. At this time, the report does *not* include data submitted through the Oregon Web Infrastructure for Treatment Services (OWITS) electronic health record.

Data are organized by outcome and reported by County Mental Health Provider (CMHP), gender, age categories and race/ethnicity. Three types of services are included in the analysis: outpatient treatment, intensive outpatient treatment and DUII rehabilitation.

Outcomes are calculated only for the episodes of treatment that ended (closed) during the quarter. An episode is an outpatient stay at a particular facility bounded by the CPMS open and close dates. Because clients can have multiple episodes of outpatient care, clients may be counted multiple times within a quarter; therefore this is *not* an unduplicated count of clients. Episodes of care that exceed 548 days have been excluded from this report.

The seven outcome measures are:

1. **Engagement in treatment.** Individuals are “engaged” when they keep their initial appointment within 14 days of enrollment and are retained in treatment at least seven days.
2. **Retention in treatment.** Individuals are “retained” in treatment when the episode of care lasts 90 or more days.
3. **Treatment completion.** Individuals have “completed” treatment when they have met all of their treatment plan criteria.
4. **No use at the end of treatment.** Individuals that have no use at the end of treatment are included in this outcome.
5. **Stable housing.** Individuals that “engaged” in treatment and had a stable living arrangement at the end of the treatment episode. Stable housing includes private residences, non-relative foster homes, or other residential facility or group home. Persons that have been hospitalized or incarcerated are excluded from this measure.
6. **Employed or in school.** Individuals that “engaged” in treatment and were employed or in school at the end of the treatment episode. This measure includes: full-, part-time and irregular employment and non-treatment school or training program.
7. **No arrests.** Individuals that “engaged” in treatment and had zero arrests in the last 30 days of treatment.

Oregon Outcomes

Table 1. Description of Calculations

Outcome	Description	Numerator	Denominator
Engagement	Percent of episodes in which the client kept the initial appointment within 14 days of enrollment and received seven or more days of treatment.	Count of episodes whose term type is not 1, and length of stay >=7days.	Count of episodes that closed in the quarter
Retention	Percent of episodes in which the client that engaged in treatment, remained in treatment for 90 or more days.	Count of episodes whose term type is not 1, and length of stay >=90 days.	Count of episodes whose term type is not 1, and length of stay >=7days. (Engaged)
Completion	Percent of episodes in which the client that engaged in treatment, successfully completed treatment.	Count of episodes with term type=3.	Count of episodes in which the client was engaged
No use	Percent of episodes in which the client that engaged in treatment, reported no use of the primary substance at end of treatment.	Count of episodes where the frequency of use is “no use” at the end of treatment.	Count of episodes in which the client was engaged
Stable housing	Percent of episodes in which the client that engaged in treatment reported a stable living arrangement at end of treatment.	Count of episodes in which the client reports living in a private residence, non-relative foster home, or other residential facility or group home.	Count of episodes in which the client was engaged and housing information was reported. Persons that are hospitalized or incarcerated are excluded.
Employed or in school	Percent of episodes in which the client that engaged in treatment reported being employed, in school or a training program.	Count of episodes in which the client reports any level of employment or training.	Count of episodes in which the client was engaged and employment or training information was reported.
No arrests in last 30 days of treatment	Percent of episodes in which the client that engaged in treatment reported zero arrests in the last 30 days of treatment.	Count of episodes in which the client reports zero arrests.	Count of episodes in which the client was engaged and the number of arrests was reported.

Engagement in Treatment

Percent of episodes in which the client kept the initial appointment within 14 days of enrollment and received seven or more days of treatment.

Counts of Clients that Closed

This section includes two tables that provide unduplicated counts of clients that closed each quarter plus annual information that can be used to assess how much of the estimated need for treatment was met through these outpatient services. The annual count is the sum of the four most recent quarterly counts. The population is the most recent population (persons 12 and older). The estimated need for treatment is based on the most recent sub state estimates of SUDs (substance use disorders including alcohol and/or drug dependence or abuse) from the National Survey on Drug Use and Health.

CMHP or Category	Closed					2012 Q1 to 2013 Q1 (12 and Older)					
	2012 Q1	2012 Q2	2012 Q3	2012 Q4	2013 Q1	Total Closed	% of Closed	Population	Est. Tx Need	% of Tx Need	% Served
	These columns contain unduplicated counts of persons in outpatient treatment that closed in that quarter (not episodes of treatment).					This column is the sum of the four most recent quarters	This percentage is based on the Total Closed divided by Oregon's Total Closed	The latest population for persons 12 and older from the American Community Survey	An estimate of the number of persons in need of treatment. (Population times the prevalence for SUDs)	This percentage is based on the Est. Tx Need divided by Oregon's Est. Tx Need	This percentage is the Total Closed divided by Est. Tx Need
	(Total closed equals the sum of these four columns)										

Examples of how to interpret the data

The table below provides two rows of sample data. Following the table are two examples of how the data may be interpreted for use in a document or when creating a talking point.

Category	Closed					2012 Q2 to 2013 Q1 (by Age Category)					
	2012 Q1	2012 Q2	2012 Q3	2012 Q4	2013 Q1	Total Closed	% of Closed	Population	Est. Tx Need	% of Tx Need	% Served
Cascadia CMHP	978	1,082	807	808	490	3,187	12.4%	294,662	23,632	7.4%	1.1%
18 to 24 year olds	1,723	1,737	1,402	1,369	761	5,269	20.5%	358,778	73,765	23.2%	1.5%

Example 1 - Cascadia CMHP

It is estimated that **7.4 percent** of Oregonians with a substance use disorder (SUD) and in need of treatment, live in Cascadia County. In the one year period between April 1, 2012 and March 31, 2013, Cascadia CMHP provided outpatient services to **12.4 percent** of the state-funded clients. Although **3,187** persons closed out of a Cascadia CMHP outpatient program, this is just **1.1 percent** of those needing treatment.

Example 2 - 18 to 24 year olds

In the one year period between April 1, 2012 and March 31, 2013 it was estimated that **73,765** young adults were in need of treatment for a substance use disorder (SUD). That represents **23.2 percent** of Oregonians with an SUD, but only **20.5 percent** (**5,269** persons) of those that closed from state-funded outpatient programs were young adults. That means only **1.5 percent** of the young adults with an SUD, closed out of a state-funded outpatient treatment program.

Counts of Episodes of Care

The last two tables in this report provide counts of the number of closed episodes of care for the first four outcome measures: engagement, retention for 90 days, completion and no use at the end of treatment. An episode of care is an outpatient stay at a particular facility bounded by the CPMS open and close dates. Because clients can have multiple episodes of care, clients may be counted multiple times within a quarter; therefore this is not an unduplicated count of clients.

Table 19. Counts of episodes of care used for outcome calculations by gender, race/ethnicity, age groups, and quarter
