## Overview

The purpose of the Data Dictionary is to inform and explain the data elements that will be collected and reported to AMH as stated in the Data Submission Guide. This dictionary is mainly for those providers submitting data from their own Electronic Health Record (EHR); however, others may find it useful, too. The Data Dictionary is intended for persons technically supporting the various (EHR)-systems. The Data Dictionary can and should be used to verify the fact that the (EHR)-systems used by providers who are required to report to AMH contain the correct data values and format, and adhere to rules and validations acceptable to the AMH data systems.

This is a comprehensive dictionary which includes instructions for *all* service modalities. Therefore, some data elements may not directly apply to your program. For convenience, the dictionary has been broken out into sections:

- Client Profile Data (CPD)
- Behavioral Health Data (BHD)
- Addiction Detail Data (ADD)
- MH Crisis Data (MCD)
- Involuntary Services (Pre-Commitment Investigation) (INS)
- Non-Medicaid Services

Data identified in this guide can be divided into 2 basic categories:

1. Status Data
2. Non-Medicaid Service Data

Status Data includes admission information and then any updates and/or changes in the client's status or record. This is similar to what is collected currently for CPMS.

Non-Medicaid Service Data will be reported after a service has been rendered for those Non-Medicaid/OHP funded services. Data fields identified in this guide specify whether the data are reported via Status updates or through Non-Medicaid Service submissions. Service data on clients that is submitted for Medicaid or through the MMIS system does not need to be submitted to AMH, since it's already submitted to the MMIS system. AMH will extract this information from MMIS. Mental Health Crisis and Involuntary Services are considered events. No Non-Medicaid service is required when just submitting a crisis or involuntary service.

### Abbreviations used in this document

SA = Substance Abuse  
MH = Mental Health  
Tx = Treatment  
Dx = Diagnosis

The tables that follow list all data elements, along with data values and rules, data type, indication of whether data element is required or not, and the field length. Status data is listed

first (Client Profile, Behavioral Health, Addiction Detail), followed by Crisis, Involuntary, and then Non-Medicaid Services.

Key to reading the data tables

Data Element Name	Data Element Values and Rules	Data Type	Req	Length
Name of MOTS data element	Valid values for data element	A = Alpha N=Numeric D=Date AN=Alphanumeric	1=required 0=not required 0-1=situational. May or may not be required. 1-m=One is required, but may have multiples. 0-m=Situational. May have none, one, or multiple.	(N) = Maximum number of characters or numbers accepted. N represents a numeric value.
	This section shows business rules that apply to listed data element			

Note that data element values can be numeric codes (i.e., 01, 02, 05, etc.), or words in Capital Case (i.e., Male, Female, Other), or FULL CAPS (i.e., AL, AK, AZ). Please pay close attention to the data element values listed in the following table.

Appendix A displays a sample template that might be helpful as EHR vendors validate that their EHR can meet the reporting requirements outlined in the data dictionary. It is meant to be just a sample list, but the format may prove helpful.

Data Element Name	Data Element Values and Rules	Data Type	Req	Length
<b>Client Profile Data Elements</b>				
<b>Facility Id</b>	State Medicaid Provider ID <sup>1</sup>	N	1	(15)
	<i>-Must exist as a valid OR Provider Medicaid in MOTS            -Must be registered for submitting (Status/Crisis/Involuntary Service) Data using the EDI method</i>

## Appendix A: Sample Tool for Mapping MOTS Data to Existing Electronic Health/Medical Record System

You can use the MOTS data dictionary to create a data mapping tool for your existing electronic health/medical record system by copying the tables in this document and adding additional columns to capture the equivalent data elements from your system. This will allow you to easily identify missing/non-equivalent data items, and to make a plan for how you will ensure the necessary data is available. This is just a sample to provide the format that you may want to use. It is not a complete list of all data fields in Status and Service.
